An internal validation check digit was introduced in 1988 to the new numbering system.</p> <p>– Code for the type of IP rights: N/A</p> <p>– Year designation: Two digit year for both Application and Priority numbers in positions 1-2</p> <p>– Serial number: fixed length of five digits in positions 3-7 (for both Application and Priority numbers)</p> <p>– Code for Internal Use: N/A</p> <p>– Control Number/Check Digit: single check digit for Application numbers only</p> <p>The check digit is calculated using a modulus 10 algorithm. Each digit of the base, from right to left is multiplied by 2,1,2,1 etc respectively. The separate digits of the products are summed and then divided by 10, the remainder being subtracted from 10 to give the check digit</p> <p>Note: Separators used (slash, space, hyphen or others) are not counted for defining the position of elements of the application number.</p>
