

Global Innovation Index 2023

The Global Innovation Index 2023

Global launch: September 27, 2023 (13:30–15:30 CEST)

WIPO Headquarters, Geneva, Switzerland

The *Global Innovation Index 2023 (GII)* takes the pulse of global innovation trends against the background of an economic environment fraught with uncertainty.

- Is the current global turbulence resulting from inflation, rising interest rates and geopolitical conflict affecting the level and nature of innovation?
- Is innovation slowing down or accelerating and how can this be evaluated in the aftermath of a global pandemic?
- How has the innovation performance of developed and developing economies fared throughout this period and what is needed for further progress going forward?

The launch of the 16th edition of the *GII* will reveal both the most innovative economies in the world and the current state of global innovation. This year's *GII* ranks the innovation performance of 132 economies, showcasing their innovation strengths and weaknesses, as well as highlighting gaps in innovation metrics.

Since 2007, the *GII* has been both an invaluable reference tool for countries that want to develop new policy strategies for innovation and economic growth and a vital benchmark for improving innovation metrics.

The United Nations General Assembly recognizes the *GII* as an authoritative benchmarking tool for measuring innovation in its resolution on Science, Technology and Innovation in the context of the Sustainable Development Goals.

The *GII* is published by WIPO in partnership with the Portulans Institute, which is supported by Corporate Network partners, together with its Academic Network partners and the *GII* Advisory Board.

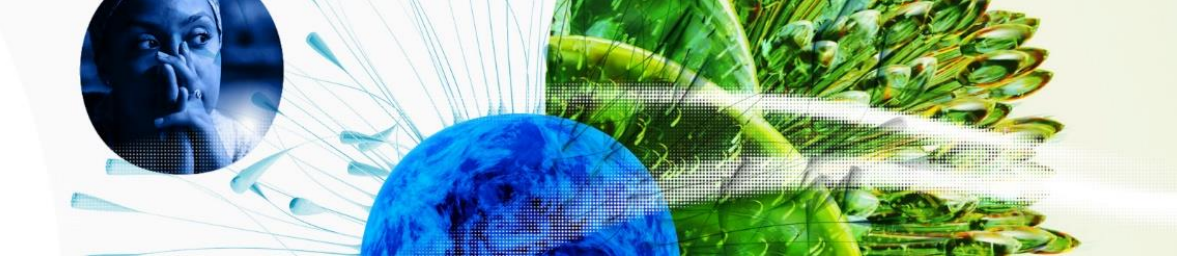

More information on the *GII* is available at www.wipo.int/global_innovation_index.
