

Regional Workshop on Dissemination and Effective Utilization of Patent Information

Roles of IP Offices for Dissemination and Utilization of PI (Patent Information)

October 16, 2018
Japan Patent Office

1. Creation, Dissemination and Utilization of PI
2. Approach to Maximize Benefits Utilizing PI
3. Next Step

What is PI (Patent Information) ?

- Patent information is the information which is created associated with the application and establishment of right for patent, utility model, design and trademark
- These information is created and provided by IP Offices for users

● Publications

- Publication of unexamined application, gazette, etc.

● Dossier information

- Information of patent application procedure and examinations

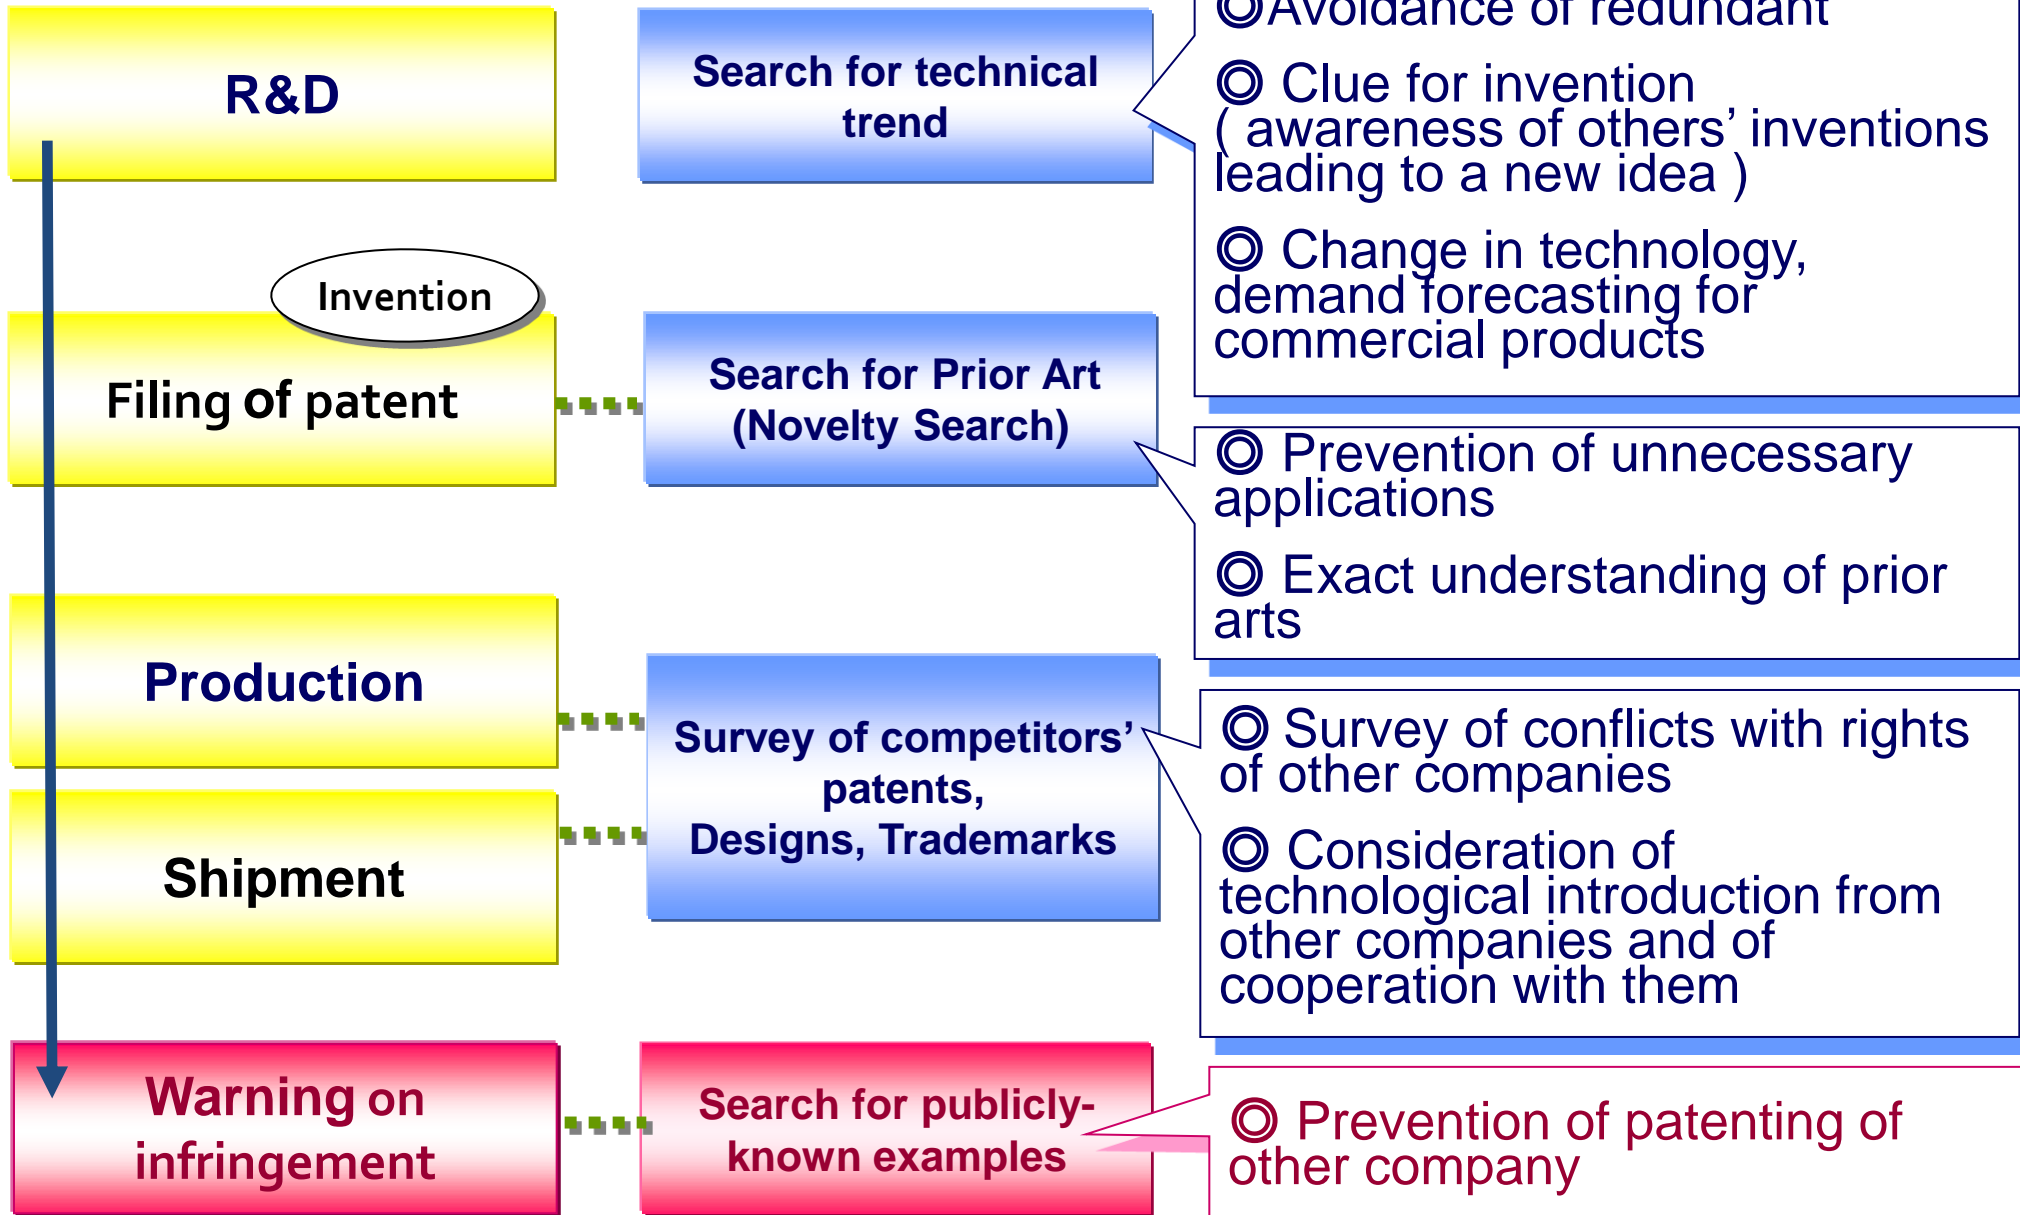

● Abstracts

- English abstracts of Japanese unexamined patent applications (PAJ)

● Legal status data and bibliographic data

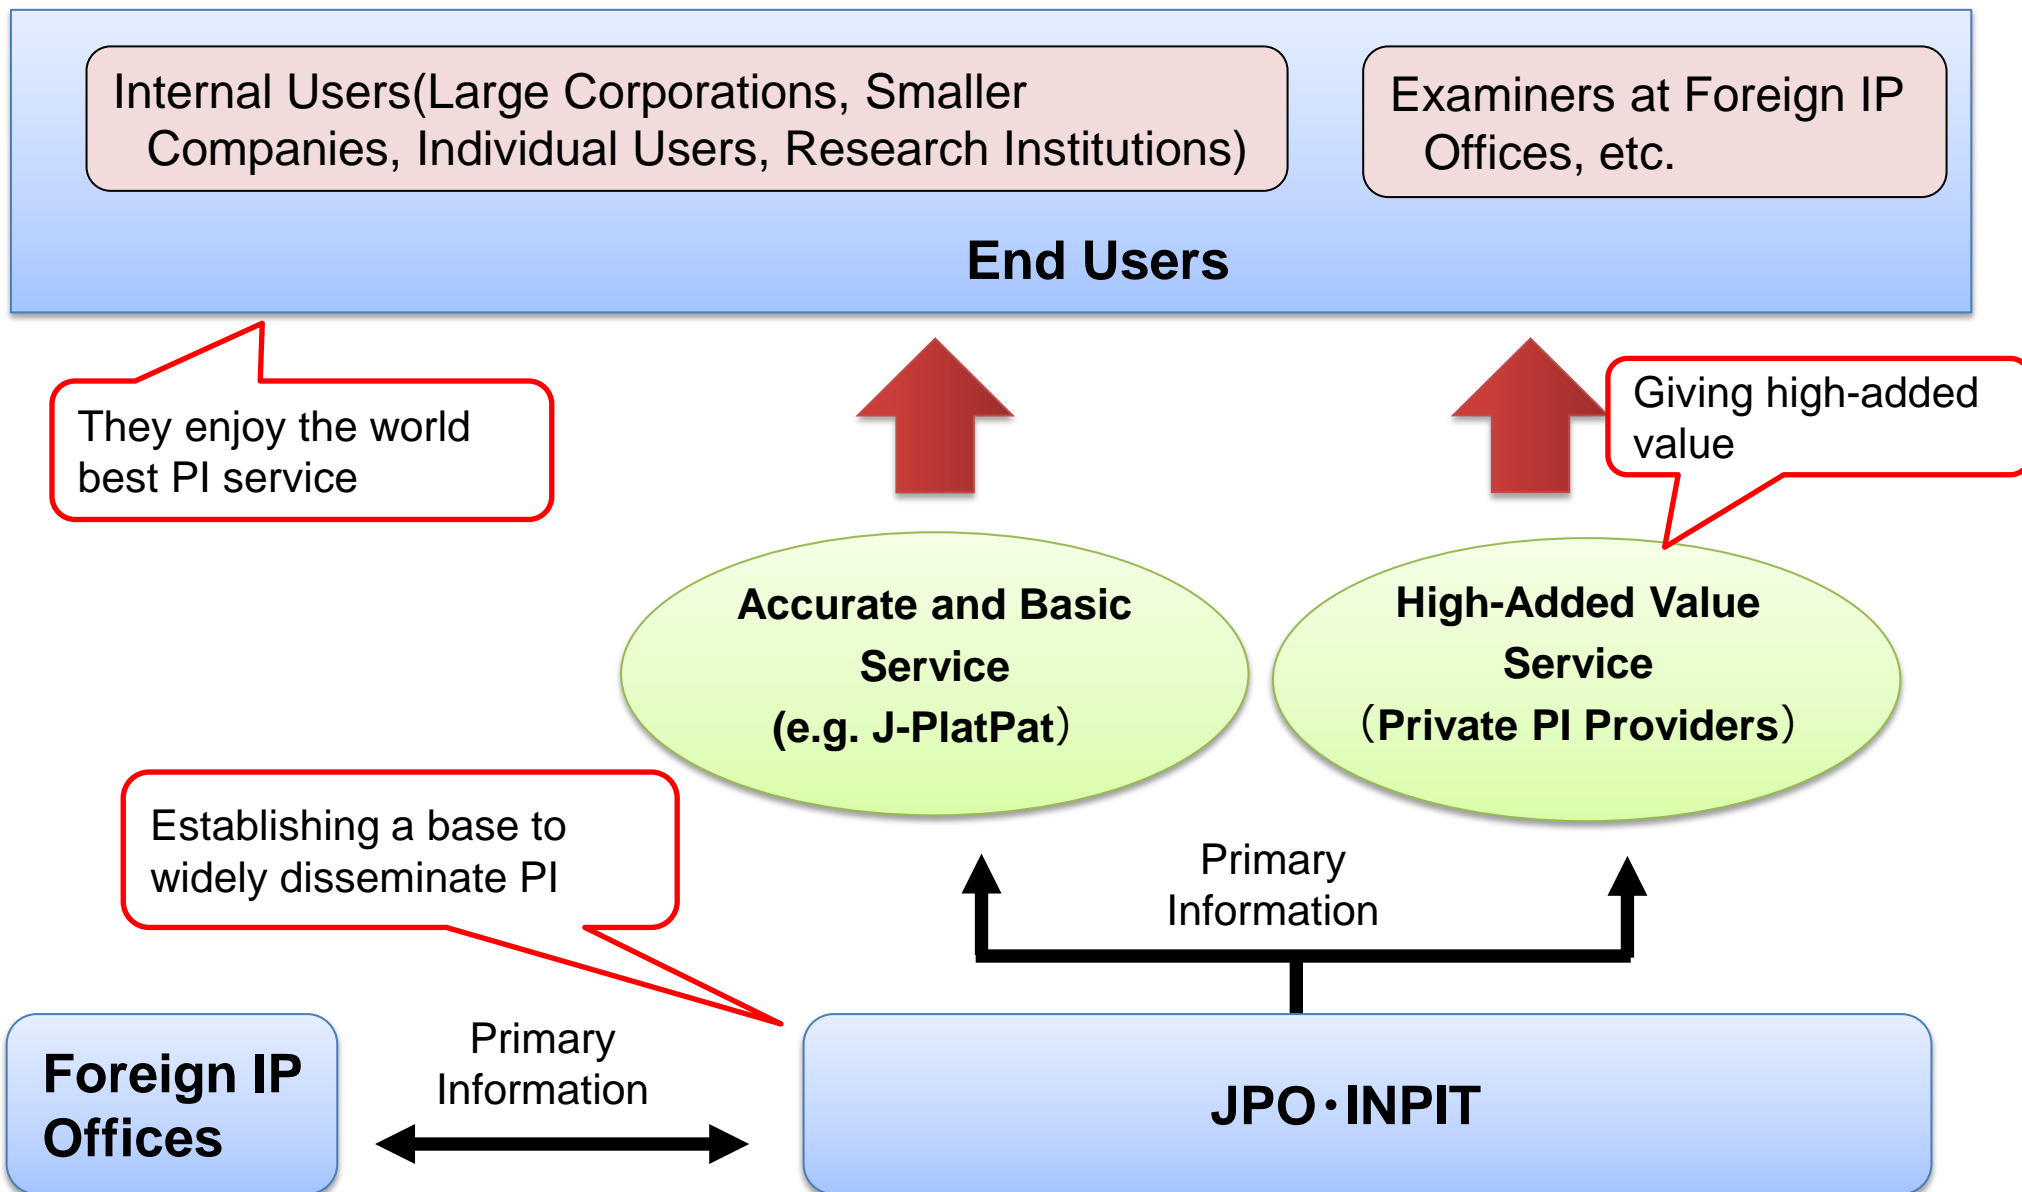

- Standardized data

- PI supports corporate R&D activities.
- Companies can come up with the strategy to deal with their competitors by obtaining their technical information through PI.
- Companies can decide whether or not to start a business in a foreign country by investigating trends in other countries through PI.

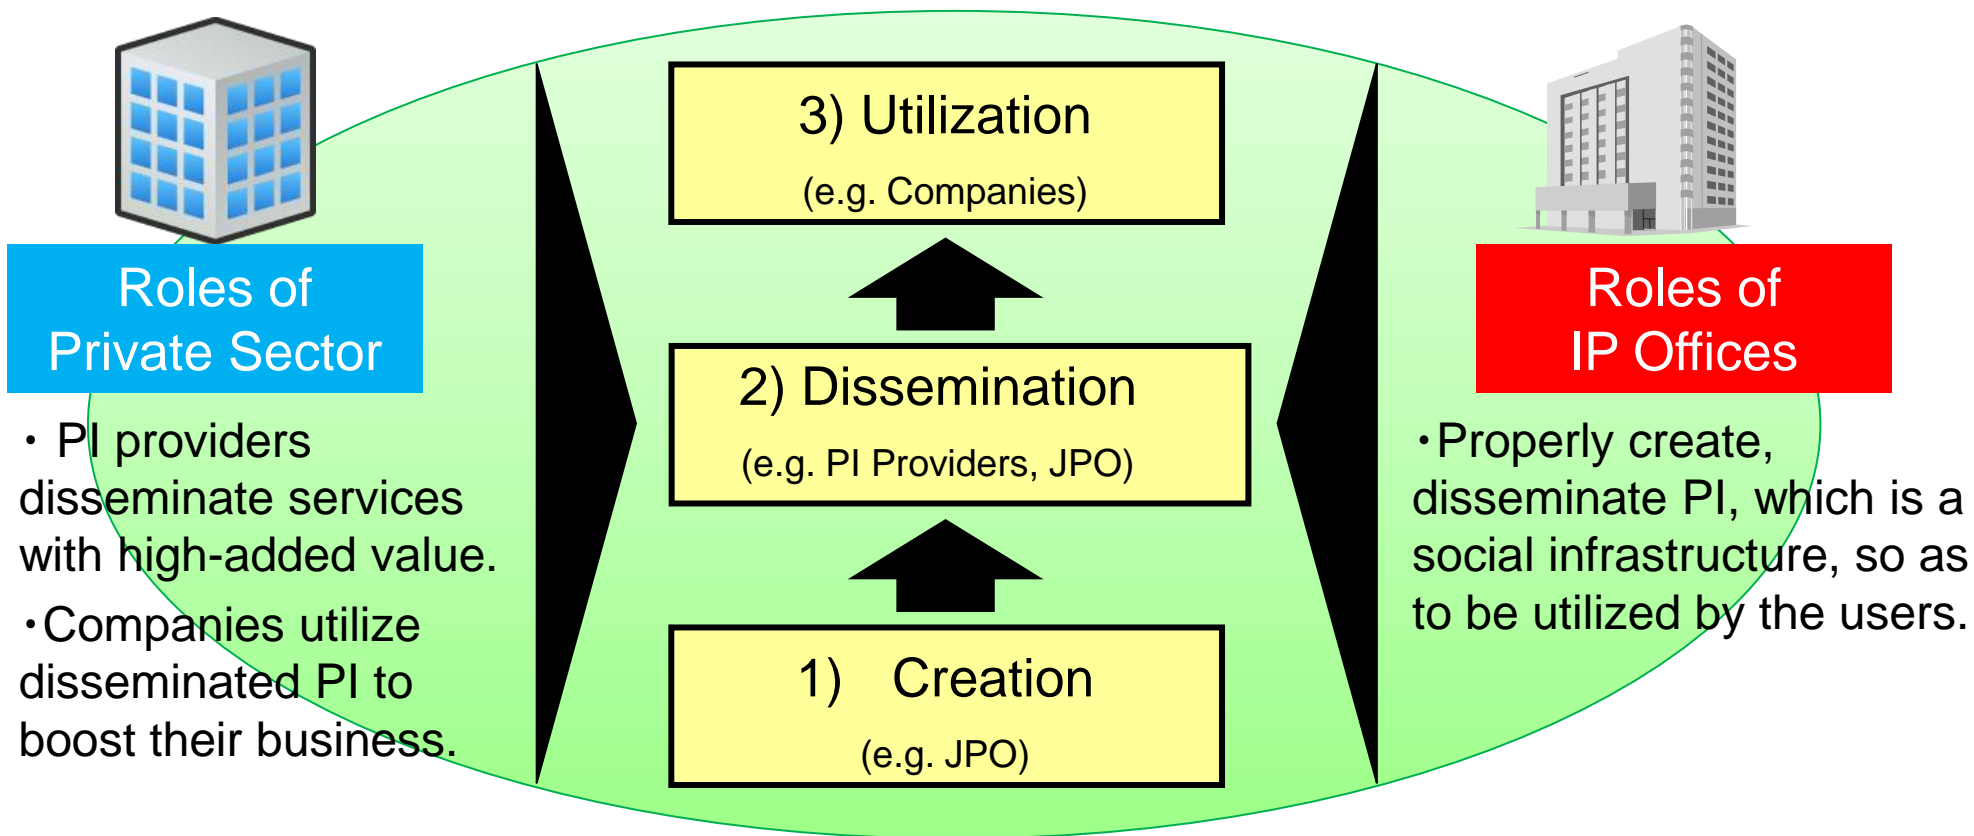

- PI forms the foundation of the Industrial Property Rights System, its creation, dissemination and utilization is one of the important policy challenges for IP Offices.
- Responsibilities of PI dissemination :
 - 【Public Sector】 Provides accurate and basic primary information
 - 【Private Sector】 Provides high-added value service processing the primary information given by its public sector

Flow of PI Data (2)

1. Creation, Dissemination and Utilization of PI
2. Approach to Maximize Benefits Utilizing PI
3. Next Step

- PI has three phases; the first phase of creation, the second phase of dissemination and the third phase of utilization.
- In order to maximize the benefits from PI, an IP Office and a private sector should play their respective roles.

Roles to play in each phase to maximize the benefits from PI

Creation of PI

Critical points to keep in mind

1) Accuracy

Correction of the Data Loss and the Errors

2) Usability

XMLization
Expansion of Data Coverage

1) Accuracy

Correction of the Data Loss and the Errors

1. JPO'S Data Quality Control System

- ✓ 2 staff, 3 support staff to run the system
- ✓ Manual error correction of PI, such as Publications (e.g. drawing data)
- ✓ Staff respond to inquiries regarding errors from users (examiners, external users)

2. Automated process

- ✓ Application form check by online filing software
- ✓ Error check during data storing

3. International Cooperation

- ✓ Creation of Authority File (*)

(*) a list of all patent document publication numbers issued by IP Offices for the assessment of completeness of data storage

Online Filing Software

Warning:
No "title of invention" is found.

```

JPO

Database

Accuracy (Authority File)

2) Usability

XMLization Expansion of Data Coverage

1. Digitalization and check of PI

- ✓ OCR conversion of past publications and manual correction of PI

2. Creation of translation resources

- ✓ Creation of English abstracts of Japanese unexamined patent applications (PAJ)
- ✓ Development of machine translation accuracy (Japanese-English machine translation) and translation functions

2) Usability

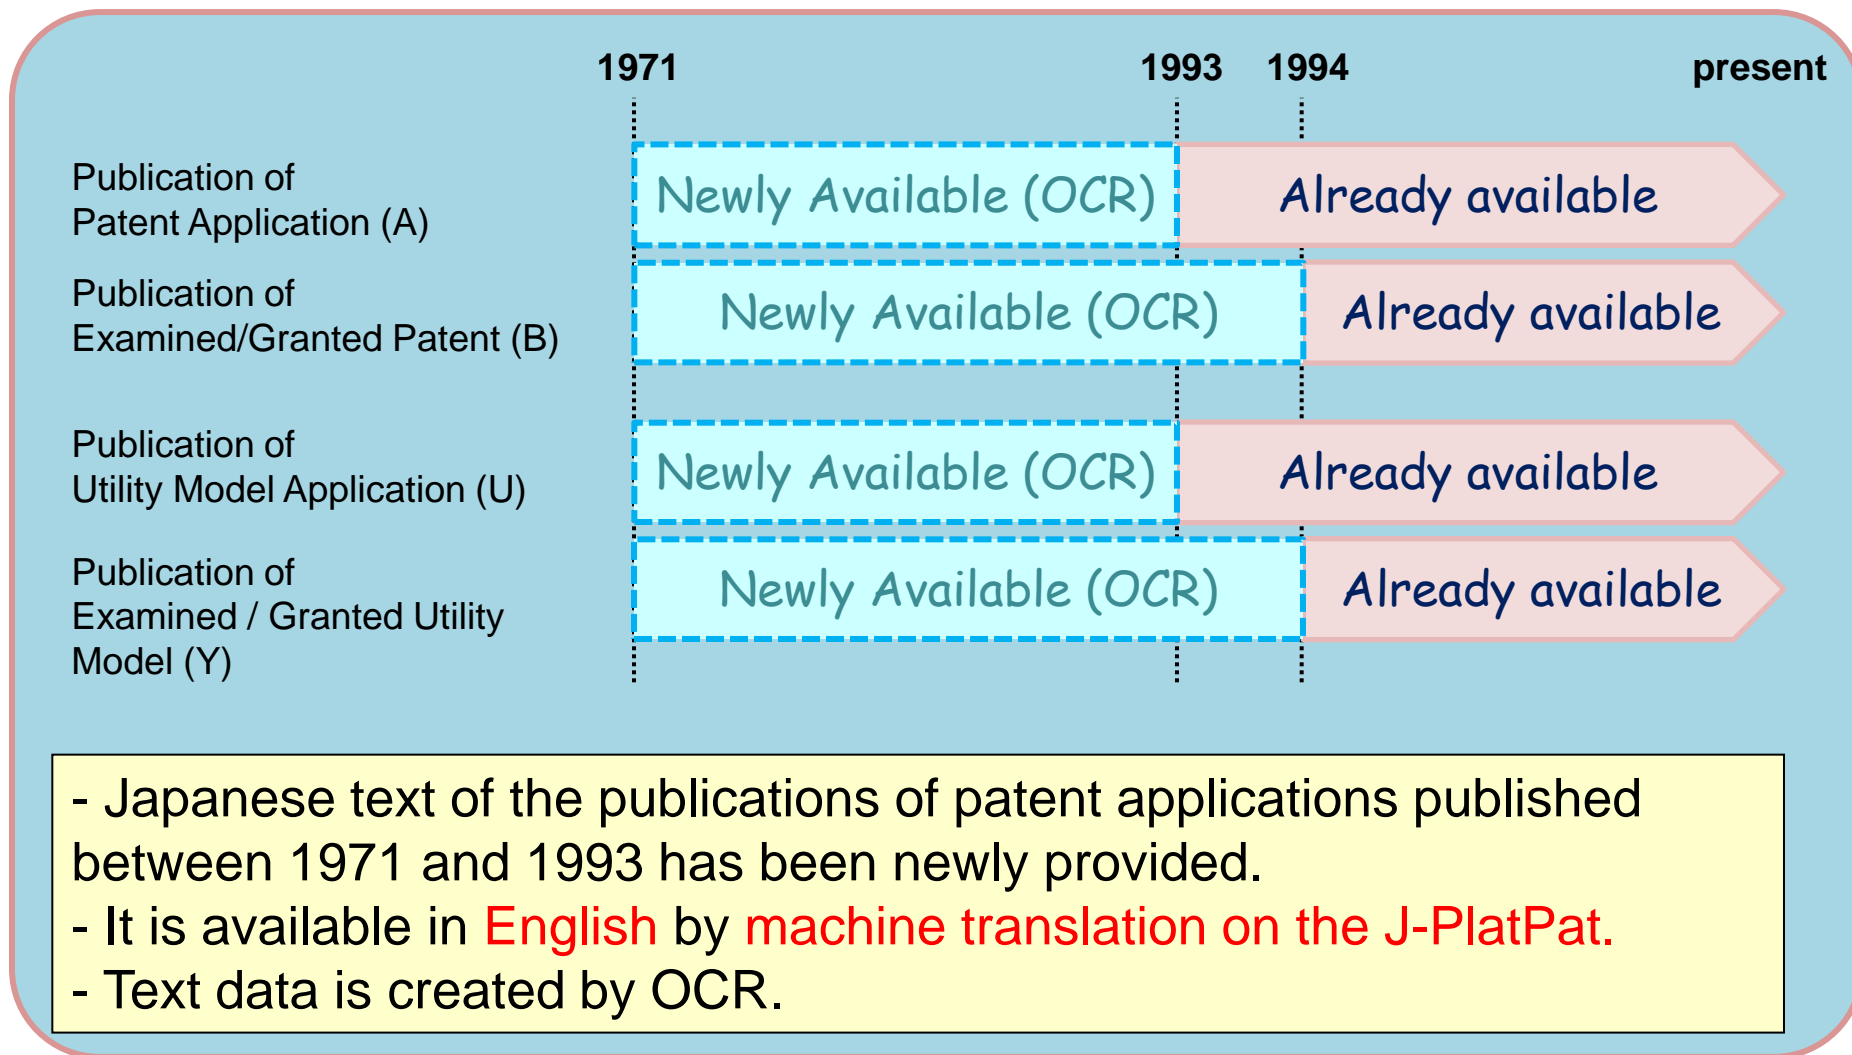

XMLization
Expansion of Data Coverage

3. Data Exchange

- ✓ Achieving data variations by receiving PI data from other countries

4. International Cooperation

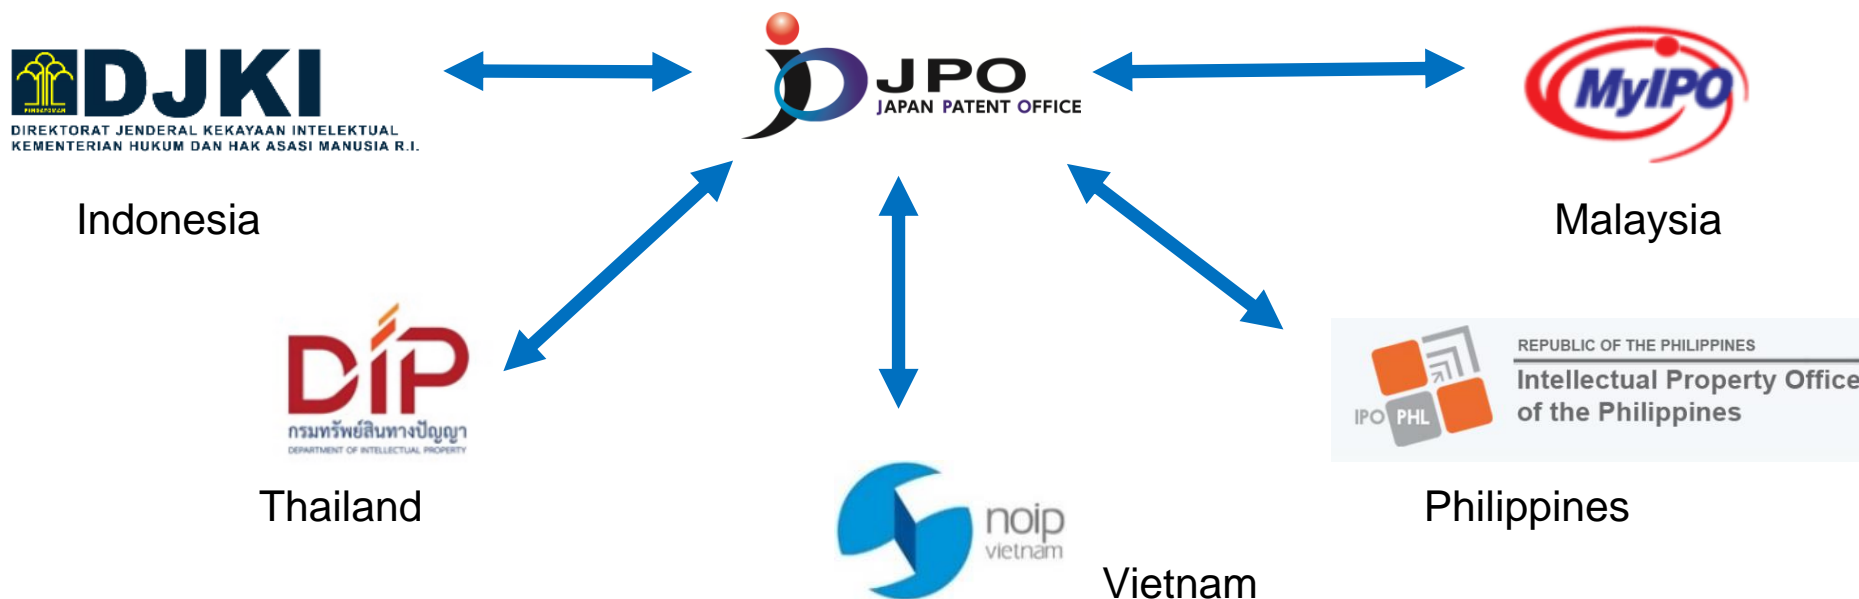

- ✓ Promoting XMLization project (IP5)
- ✓ Promoting digitalization of PI data through WIPO Japan Fund

JPO has gradually cleaned the OCRed text data. The publications cited as a prior art by JPO's examiners in 2016 or later are covered.

- JPO completed data exchange agreement with Indonesia, the Philippines, Thailand, Vietnam and Malaysia (*).
- India agreed on Joint Statement stipulating data exchange with the JPO.
- JPO will continue talking with Brazil and Mexico to reach data exchange agreement

(※) Received PI data is to be provided free of charge to general users through "Foreign Patent Information Service (FOPISE)".

- Through the WIPO Japan Fund, JPO supports digitalization of paper documents, in order to improve the data availability of IP information of ASEAN and other emerging countries.

Supporting the digitalization of paper application documents, etc.
to improve emerging countries' accessibility to PI

<Supporting activities completed in FY2017>

- Data Cleaning: Indonesia
- Workflow Optimization: Mongolia, Cambodia

<Supporting activities to be done in FY2018>

- Digitalization support: Vietnam, Philippines
- Optimization of workflow: Vietnam, Laos
- Workflow optimization (follow-up): Thailand, Philippines

Dissemination of PI

Critical points to keep in mind

1) Timeliness

Promptness of providing the data

2) Barrier Free Flow of
PI

Data availability based on free of charge

1) Timeliness

Promptness of providing the data

1. PI is provided through Internet
 - ✓ Providing online web service (J-PlatPat)
 - ✓ Providing bulk download service (Internet Gazette, Standardized Data)

2. PI is to be updated in a timely manner
 - ✓ One month delay of updating data is to be resolved by system development in May, 2019
 - ✓ Data exchange with Foreign IP Offices is done through FTP server

2) Barrier Free Flow of PI

Data availability based on free of charge

1. PI is provided free of charge

- ✓ Basic service (online service, bulk data download service) is provided free of charge.

2. Communicating with users about how to use PI services

- ✓ Service introduction regarding J-PlatPat are held throughout Japan (17 sessions are to be held in FY2018).
- ✓ Not only introducing the functions of J-PlatPat, but also giving solutions to common problems raised by the users.
(JPO distributes J-PlatPat's handbooks and brochures including the topic of failure cases to the users)

2) Barrier Free Flow of PI

Data availability based on free of charge

3. Providing PI to external users

- ✓ JPO try to stipulates to provide PI to a third party in the data exchange agreement with foreign IP Offices
- ✓ PI is provided to external users through online services by Foreign IP Offices (e.g. PATENTSCOPE, Espacenet)

➤ J-PlatPat can be used to propose a solution for various problems users have.

■ Case Study 1

Try to commercialize products that can be manufactured not only by their own technology, but also by patents that other companies have.

Goal

Let's use J-PlatPat to find out companies with a technology that can lead to a possible collaboration.

■ Case Study 2

Try to collect companies profiles for an extension of distribution channels

Goal

Let's use J-PlatPat to search for a gazette information filed by companies to which you want to distribute your products.

“BASIC PRINCIPLES” of IP5 PI Policy

The IP5 Offices share the common understanding that industrial property information shall be provided to the public and **to any third party** based on the existing principle of **marginal cost or free of charge**. In order to support a **barrier free flow of information** among industrial property offices, data exchanged by the IP5 Offices may be provided to third party industrial property offices in accordance with these guidelines and under the condition that the reciprocity principle is accepted by the third party industrial property office.

Barrier free exchange of data to be widely disseminated

- 2010: Agreed on Trilateral PI Policy
- 2011: Started to discuss the expansion of Trilateral PI Policy to IP5
- 2012: Drafted IP5 PI Policy proposed by EPO
- 2013: Agreed on IP5 PI Policy presented at IP5WG2
- 2014: Agreed on Action Plan for IP5 PI Policy

Expansion of frameworks
for barrier free flow of PI

Utilization of PI

Critical points to keep in mind

1) System Development

Improvement of Services

2) Acquisition of
Information

User Needs, Technical Trends,
Activities of other IP Offices

1) System Development

Improvement of Services

1. Non-stop system development based on needs etc.
 - ✓ Upgrading J-PlatPat (Enhancement of English search tool and machine translation functions)
 - ✓ Improved the method to provide PI (offering a server to provide PI)
 - ✓ Considering other methods to provide PI (e.g. API)

2) Acquisition of Information

User Needs, Technical Trends, Activities of other IP Offices

1. Opportunities to obtain user needs

- ✓ Exchanging opinions with users
- ✓ Collecting needs by questionnaire
- ✓ Collecting feedback after conference

2. Grasping technological trends and the efforts of foreign IP Offices

- ✓ Utilization of AI technology, big data and open sources
- ✓ Understanding the service menu of online service provided by foreign IP Offices

1. Research

- ✓ Prior art search
- ✓ Free to operate (FTO)
- ✓ Infringement search
- ✓ Technical trends surveys

2. Analysis

- ✓ Patent mapping
- ✓ IP landscape

Corporate Activities

Companies can plan their own business strategy by conducting survey and analysis on competitors status, technical trends etc.

IP Offices

IP Offices can improve the quality of examinations by enhancing the search functions for examiners and by analyzing trends in technical fields.

● Roles of IP Offices

IP Offices are required to:

- Create and disseminate PI appropriately for anyone to utilize it
- Create “accurate” PI advancing the quality of its services
- Achieve “barrier-free flow” of PI for anyone to easily access it

● Roles of Private Sector

PI providers are required to:

- Process PI to disseminate services with high-added value to users

Companies are required to:

- Boost their business by utilizing the disseminated PI

More Economic Activities
in your country!

More Economic Investments
from other countries !

Patent Applications filed by JP Companies

➤ The proportion of patent applications filed by JP companies is high.

Application share by applicant's nationality in each country (Patent)

(Source) Created by JPO based on WIPO IP Statistic Data Center

Meaning of JPO's PI Data

Your country

- Prior art search before filing to Japan
- Clearance search
- Survey of technology trend in Japan

Your Office

Capacity building

Economic Development

JPO's PI data

Data exchange

Your Office's IP data

JP companies

- Prior art search before filing to your country
- Clearance search
- Survey of technology trend in your country

Enhancement of Understanding of IP situation in your country

Increase of IP applications filed to your country

Increase of IP rights in your country

Increase of Investment from Japan

1. Creation, Dissemination and Utilization of PI
2. Approach to Maximize Benefits Utilizing PI
3. Next Step

- The numbers of patent applications and PCT international applications have been increasing year by year.
- Expansion of IP application will raise the value of PI information as big data.

Trends in the number of patent applications

Trends in the number of PCT international applications

(Source) Created by JPO based on WIPO IP Statistic Data Center

Number of Patent Applications by Country

- Overall, the number of patent applications is increasing.
- In ten years, India is 1.6 times, Brazil, 1.4 times, Mexico 1.1 times, Indonesia 2.1 times, Thailand 1.2 times, Malaysia 1.5 times, Vietnam is 2.4 times bigger in number and the Philippines stays the same.

Total Patent Applications by Filing Office

(Source) Created by JPO based on WIPO IP Statistic Data Center

※Note:the number of patent applications in 2012 in Indonesia has not been obtained yet

- The amount of international digital data tends to increase year by year.
(2010: 988 exabyte (0.988 trillion gigabytes)
→ 2020: about 40 zettabytes (40 trillion gigabytes))

Estimate of increasing amount of digital data

➤ Necessity to Digitalize PI data

- A global trend of an increase in the number of applications requests IP Offices to accelerate a process speed of each operation.
- A digitization of PI will contribute to an automation of operational process, and texted and structured PI data accelerates its process furthermore.

➤ Exchange and Distribution of Digitized PI Data

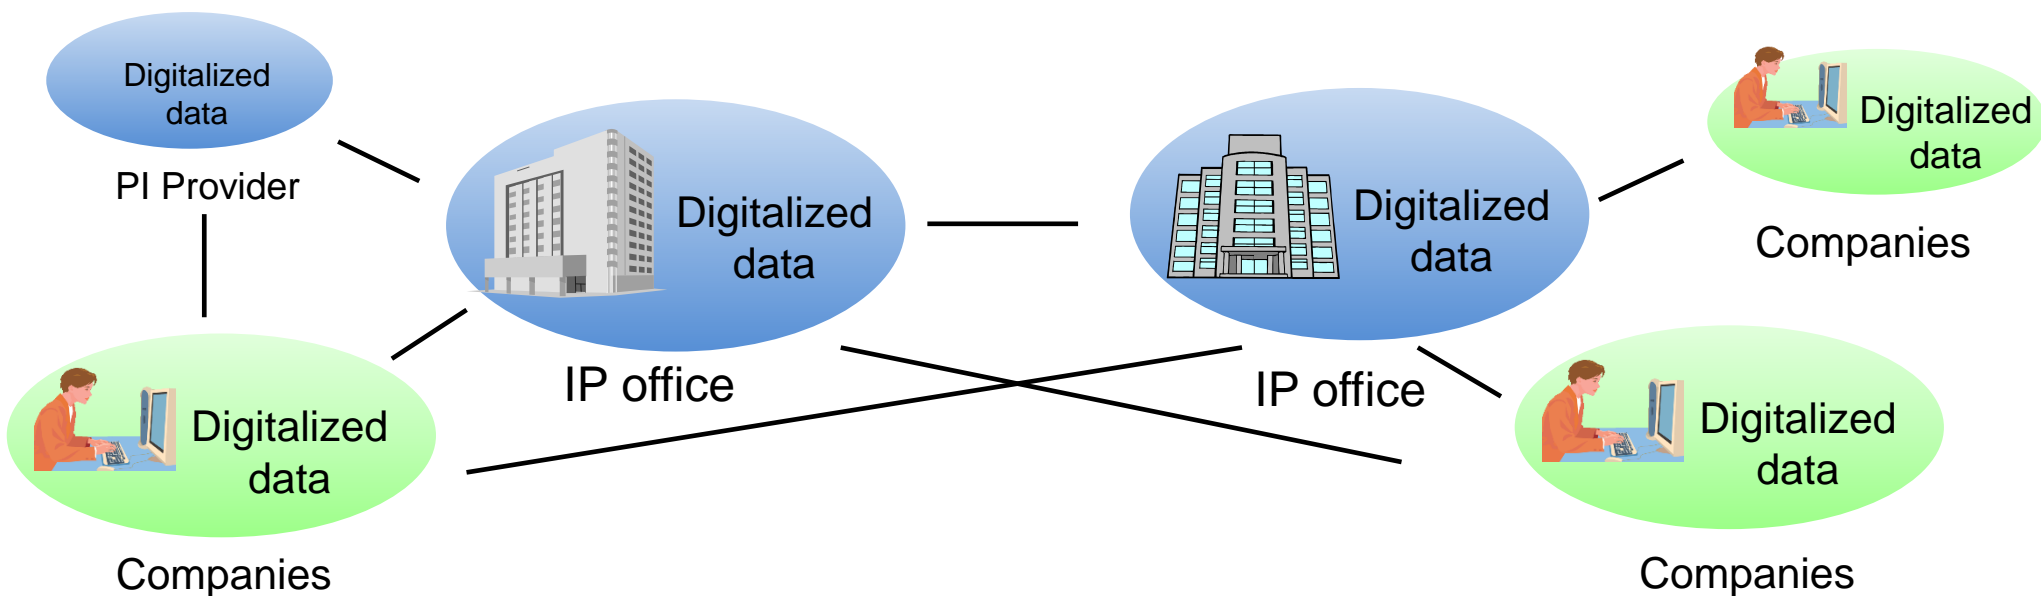

- PI data as big data can provide new values for services.
- Such data can be collected through data exchanges with IP Offices.
- Distribution of PI data to public will encourage private sector to develop services.

➤ Extraction of Value from “BIG” PI Data

- Public and private sector can extract value from PI as big data for furthermore development.

➤ IP offices play a main role in an acceleration of digitalized data.

Ecosystem driven by digitalized data

- Applying AI technology to expanding IP information, big data, will create new added values, e.g. IP intelligence.

Big Data
(PI Data)

Advanced operation

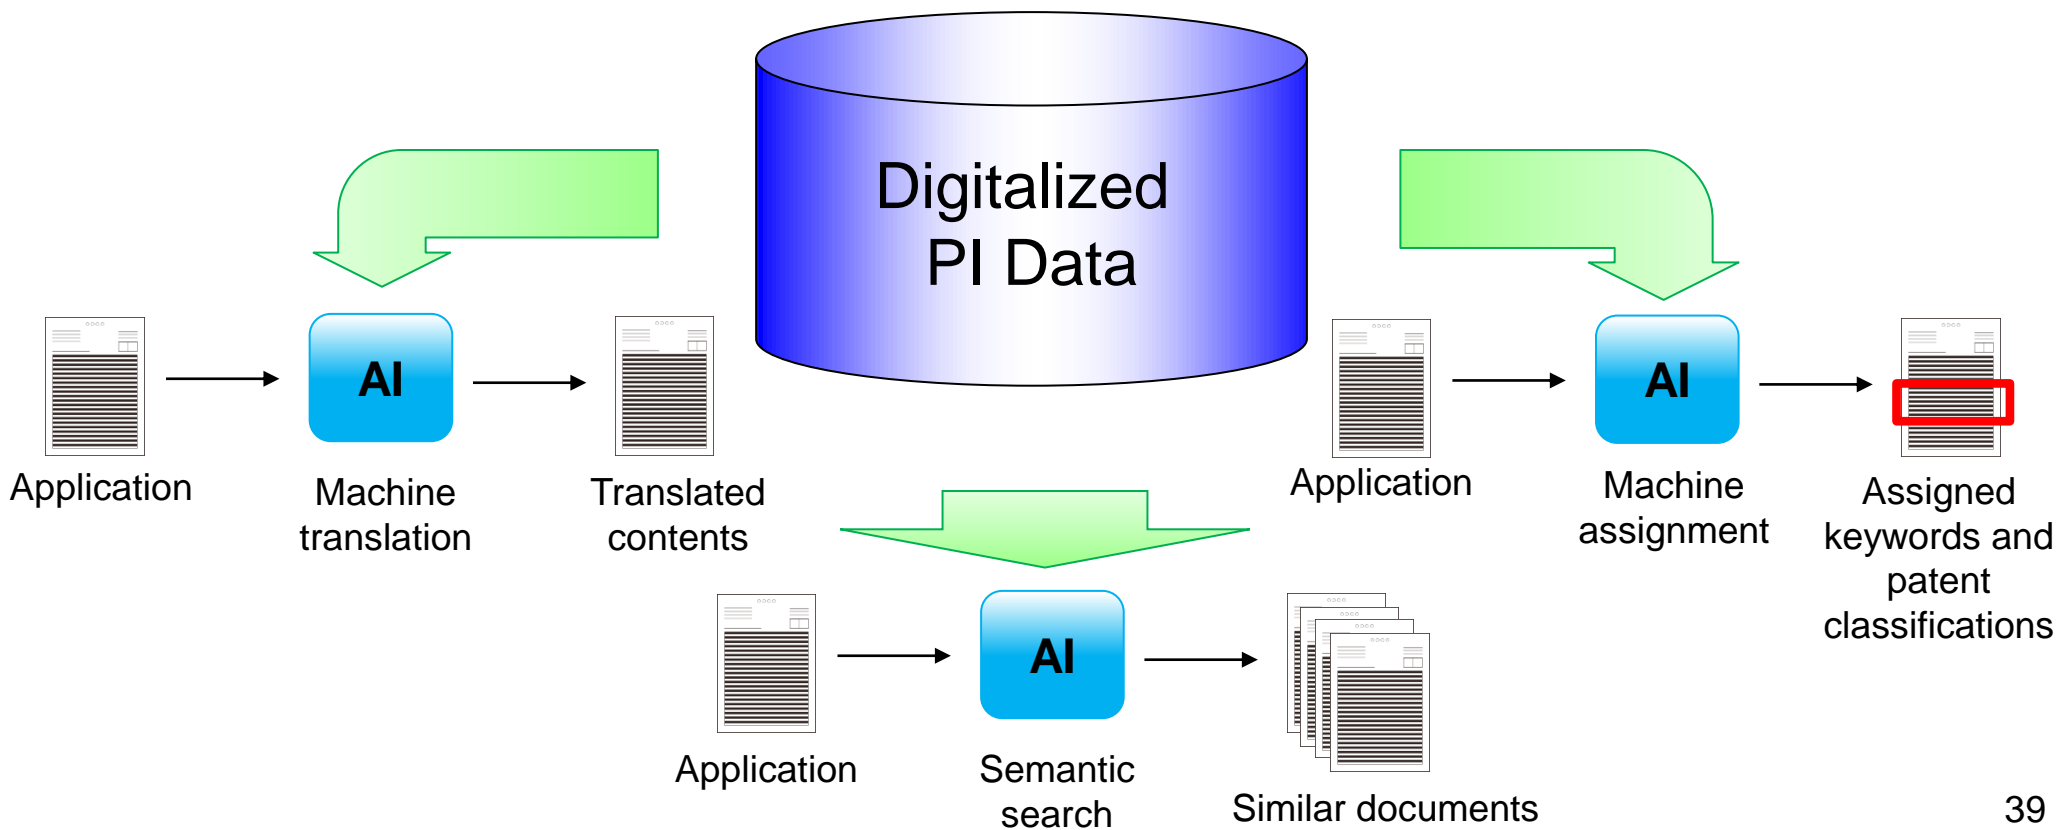

**Highly upgraded
Search · Analysis ·
Machine Translation**

AI Technology

Operation

- JPO is trying to utilize AI technologies, such as machine translation, assignment of classifications and keywords, and semantic search.
- Digitalized PI data is used for machine learning.

➤ Introducing AI technologies can be a new technique for analyzing enormous patent documents.

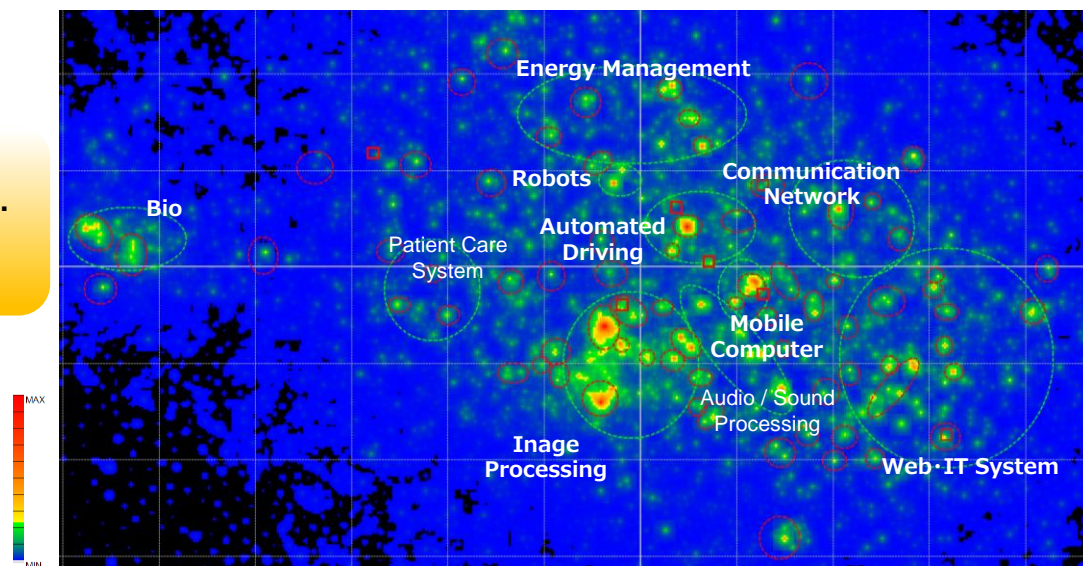

Patent Documents, etc.

Analysis of the direction of R&D etc.
from the result of analysis

New frontier for R&D

Efficient analysis of enormous patent documents

The result of the analysis on the technology trends using text mining etc.
