

Topic 2: Patent Family Concepts and Sources for Family Information

Lutz Mailänder

Head, Cooperation on Examination and Training Section

PCT International Cooperation Division

Cybercity
March 22, 2022

Agenda

- Families – **why**
 - Priority rights
 - PCT filings without priority
- Families – **which**
 - Types (PCT, simple, extended)
- Families – **when**
 - Do we need to pay attention to different types of families?
 - 10% of families have more than one PCT application as member
- Families – **where**
 - Sources of family information

Work-Sharing in the PCT national phase

Utilizing examination work products from other national phases for improving **efficiency** and **quality** requires

- **Databases/platforms** providing
 - Patent **family information** (family table) [>Topic 2]
 - **Examination status** of family members [>Topic 3]
 - **Access to examination work products** (**dossiers**, file wrappers) of family members [>Topic 4]

- Ideally, platforms which integrate this information in a user-friendly manner, e.g. within family table; and with additional tools, for example, for comparing work products (Common Citation Document - CCD) [>Topic 6]

- Information on differing national practices (naming and content of work products; important case law; exclusions; ..)

Abstract of WO2007111918 (A2)

Translate this text into
Bulgarian **patenttranslate** powered by EPD and Google

Various embodiments of systems and methods for collection and disposal of infectious and medical waste are disclosed. An embodiment includes a system with a body having a chamber that receives a container of medical waste. The chamber may include a canister that has limited access to the interior of the

Which work products are useful? And to what extent?

Homework Topic 2 will present examples

Origin of patent families

There are **various reasons** for patent family relations between **distinct applications/filings**:

- A. Patent protection is territorial, i.e. inventors/investors may have to seek protection in various different jurisdictions (“**extensions**”)
 - B.
-
- Foreign applications usually claim **priorities** of earlier applications filed in other jurisdictions based on
 - Paris Convention
 - TRIPS agreement
 - **Family relations because applications share priorities**
 - PCT applications can be filed without claiming priorities
 - **Family relations because applications share PCT application number**
 - **PCT family**

Different types of families depending on whether

- all priorities are shared
- only some priorities are shared

3 priorities
3 countries

Priorities: Paris Convention of 1883

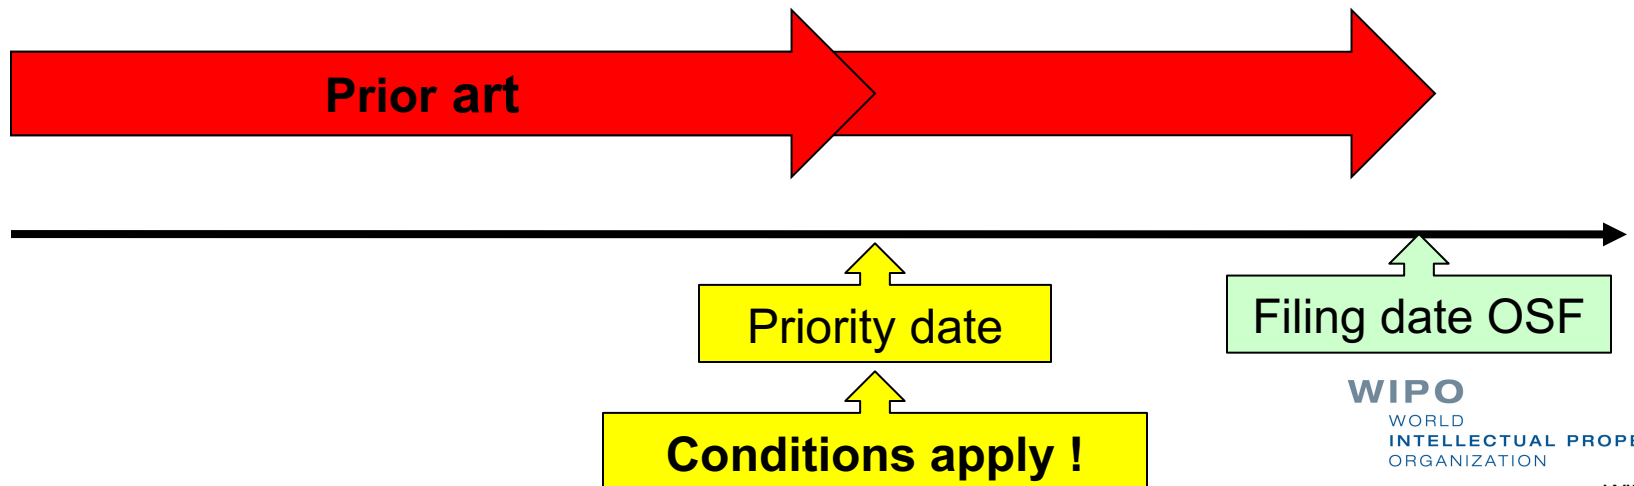

- Covers patents, designs, trademarks,..
- Facilitates second/subsequent filings abroad
- Equal protection to nationals and foreigners (non-discrimination)
 - Foreigners: nationals and residents of any Union country
- Mutual recognition of (Paris Convention) **priority rights**:
 - at OSF: Treatment of application as if filed on date of first filing, i.e. same prior art is to be applied if claimed subject matter is fully disclosed in priority
 - 12 month period to file an application claiming the priority of an earlier application (Art. 4 C (1))
- Permits combination of **multiple priority rights** (same or different countries) (Art. 4 F)
- Permits **additions of technical subject matter** (Art. 4 F)
 - As long as national definition of **unity** is met

Priorities: Benefits of claiming priorities

■ OFF (Office of First Filing)

■ OSF (Office of Second Filing)

Article 4 F Paris Convention

"No country of the Union may refuse a priority or a patent application on the ground

that the applicant claims **multiple priorities**, even if they originate in **different countries**, or on the ground

that an application claiming one or more priorities contains one or more elements that were not included in the application or applications whose priority is claimed,

provided that, in both cases, there is unity of invention within the meaning of the law of the country.

With respect to the elements not included in the application or applications whose priority is claimed, the filing of the subsequent application shall give rise to a right of priority under ordinary conditions."

first filing with IB
Espacenet repeats
application number among
priority numbers!

PCT family

- 'PCT family' includes the international application and all its national phase entries
- Linked through the **PCT application number**
- Linked as well through the **priorities** - if any were claimed – which the national phase entries inherit from the international application

PCT family – simple family

- 'PCT family' includes the international application and all its national phase entries
- Linked through the PCT application number
- Linked as well through the priorities - if any were claimed – which the national phase entries inherit from the international application
- There may be **additional applications** in the simple family **which are not PCT NPEs because country is not PCT member state**, linked through priorities
 - For example, a BD application filed through the Paris route and claiming the same priorities like the PCT application
 - For example, a foreign application filed in JM
- It may also happen that a simple family includes **several distinct PCT families**; for example PCT/DK2006/000477

PCT/KR2012/001812: 2 x WO in family

Scree

Article 4 F Paris Convention

"No country of the Union may refuse a priority or a patent application on the ground

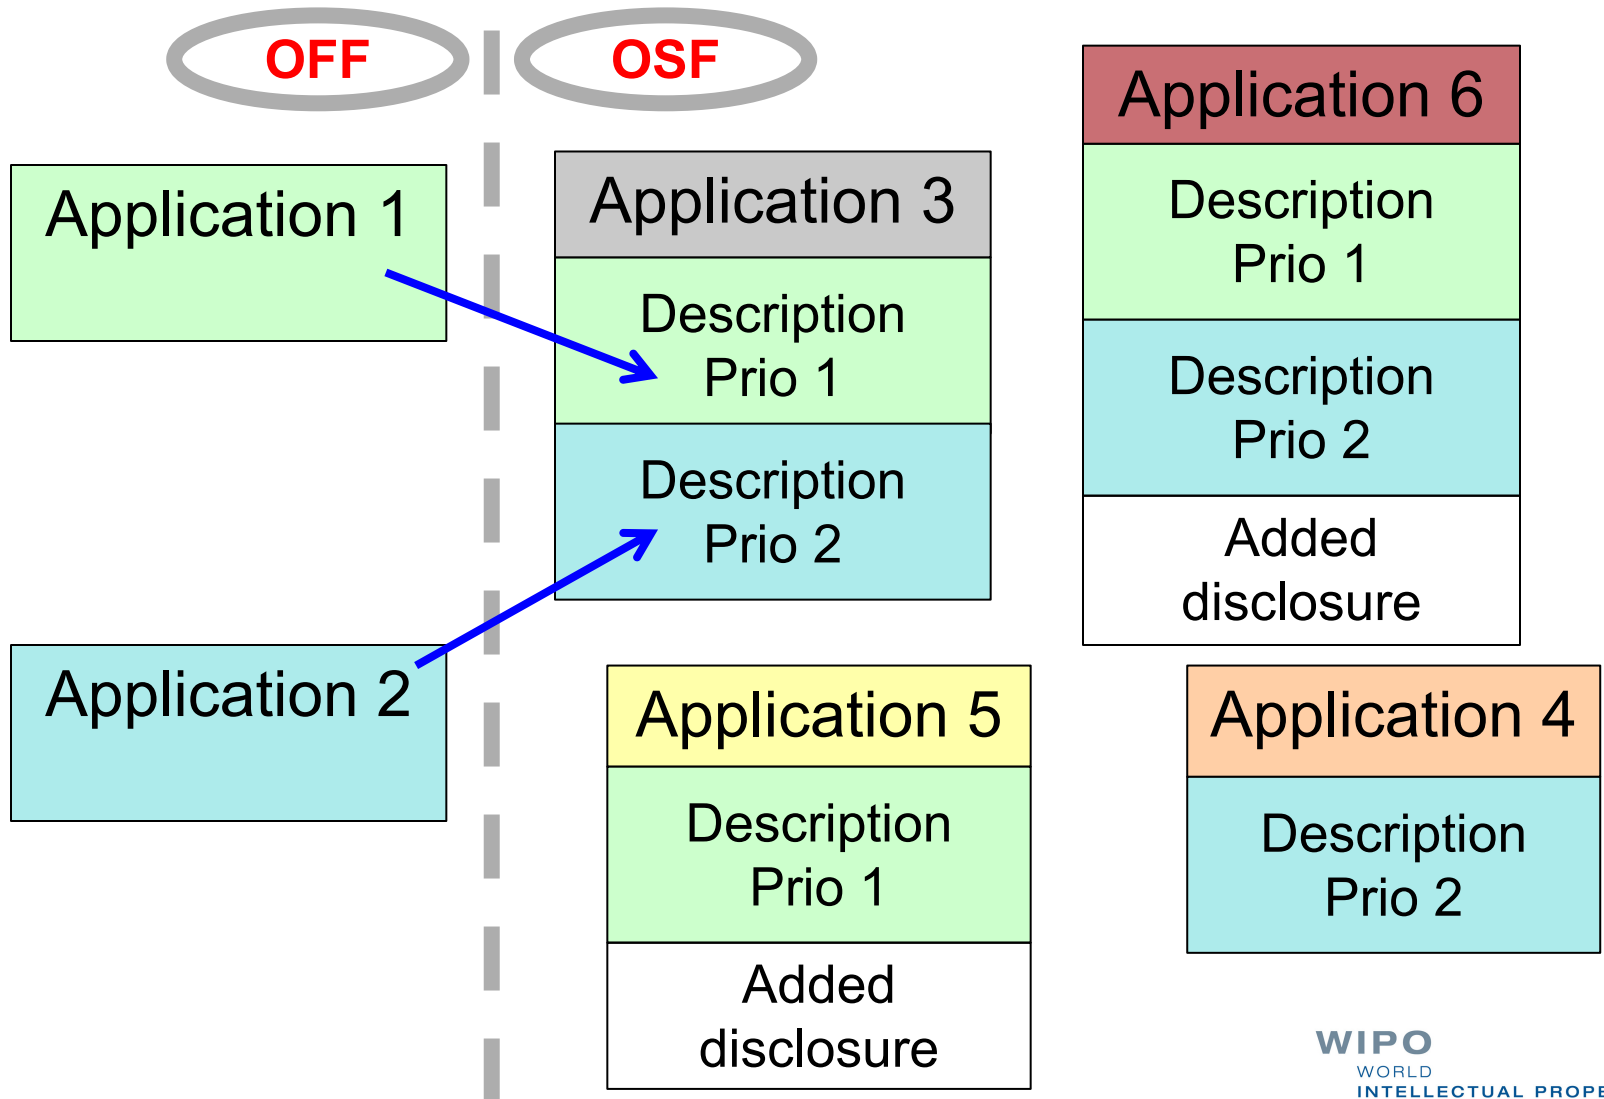

that the applicant claims multiple priorities, even if they originate in different countries, or on the ground

that an application claiming one or more priorities contains **one or more elements that were not included** in the application or applications whose priority is claimed,

provided that, in both cases, there is unity of invention within the meaning of the law of the country.

With respect to the elements not included in the application or applications whose priority is claimed, the filing of the subsequent application shall give rise to a right of priority under ordinary conditions."

Combining multiple priorities

Technical disclosures of family members

- Even though priorities are claimed, technical disclosure (descriptions and drawings) may differ:

- Combinations of different sets of descriptions
- Parts of descriptions may be removed
- Technical subject matter may have been added

Permitted by
Paris
Convention

- Claims may also be different since claims need to be supported by description

- **Applicants are not obliged to reveal modifications when making a new application**

- Differences are revealed only by comparing descriptions

- When are differences least likely?

- When all claimed priorities are the same

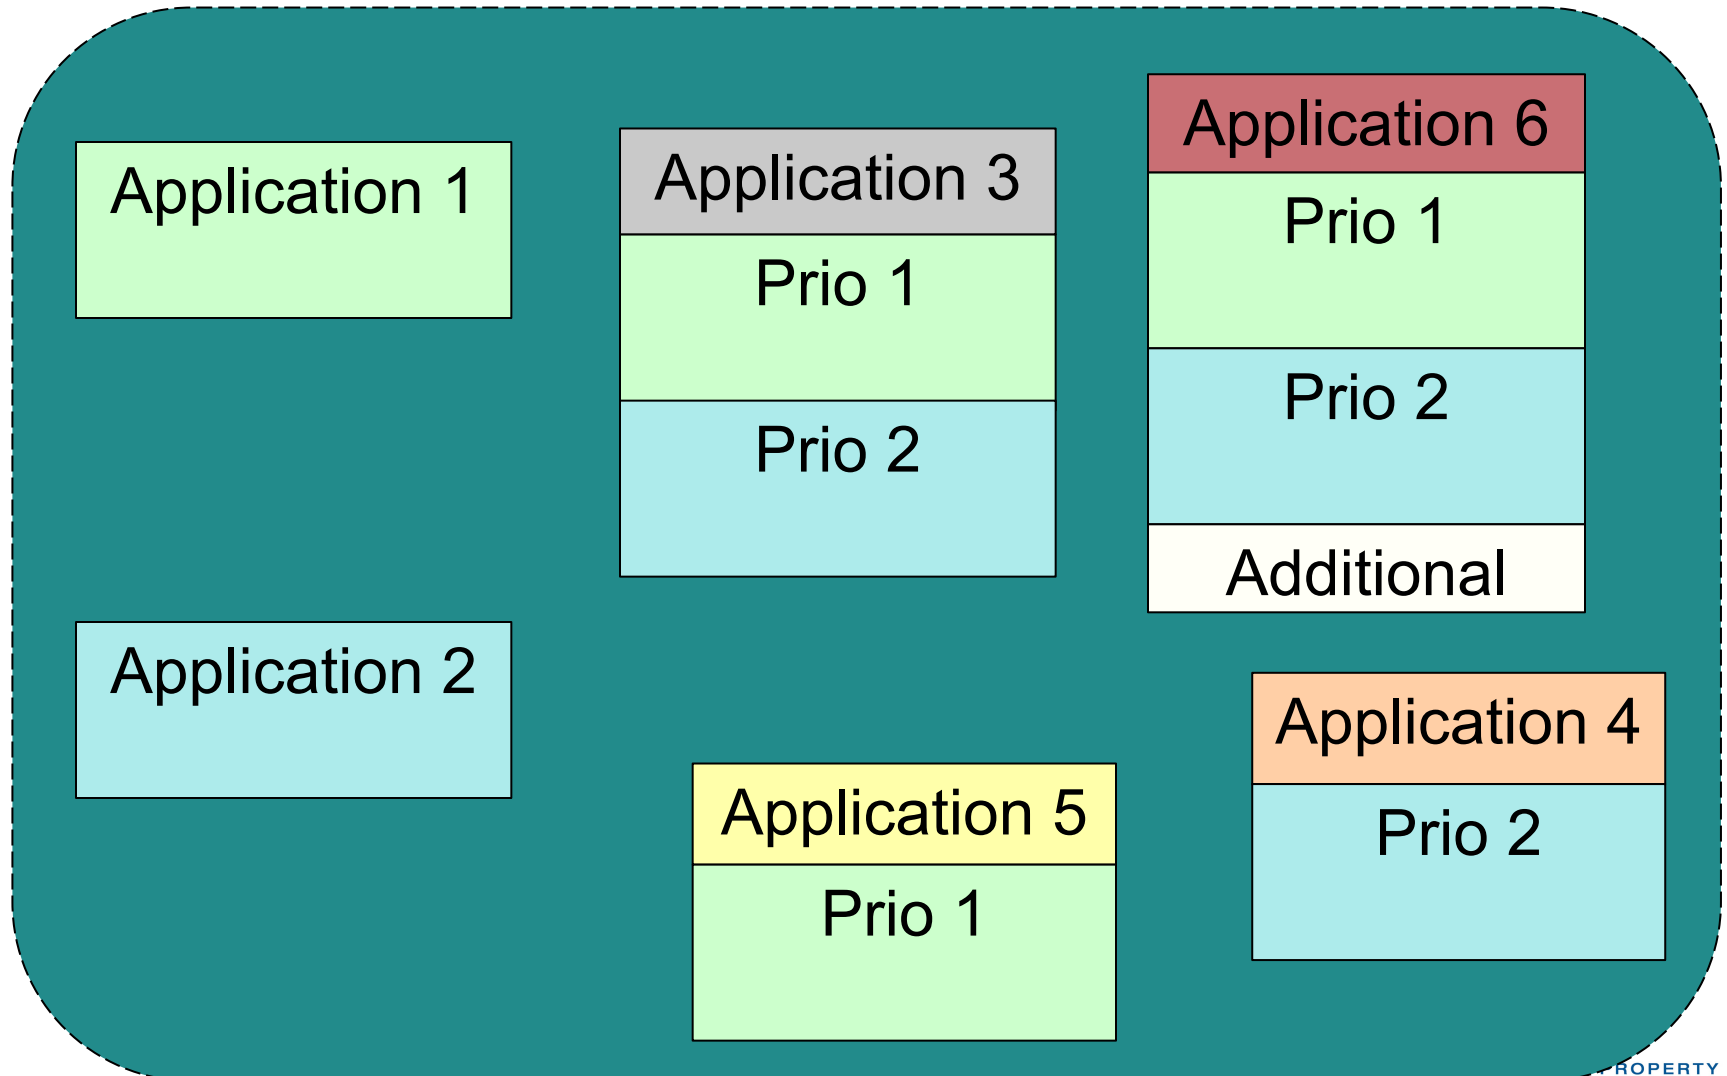

Family concepts based on priorities

- Simple family:
 - All members of the family have exactly the same priority or priorities

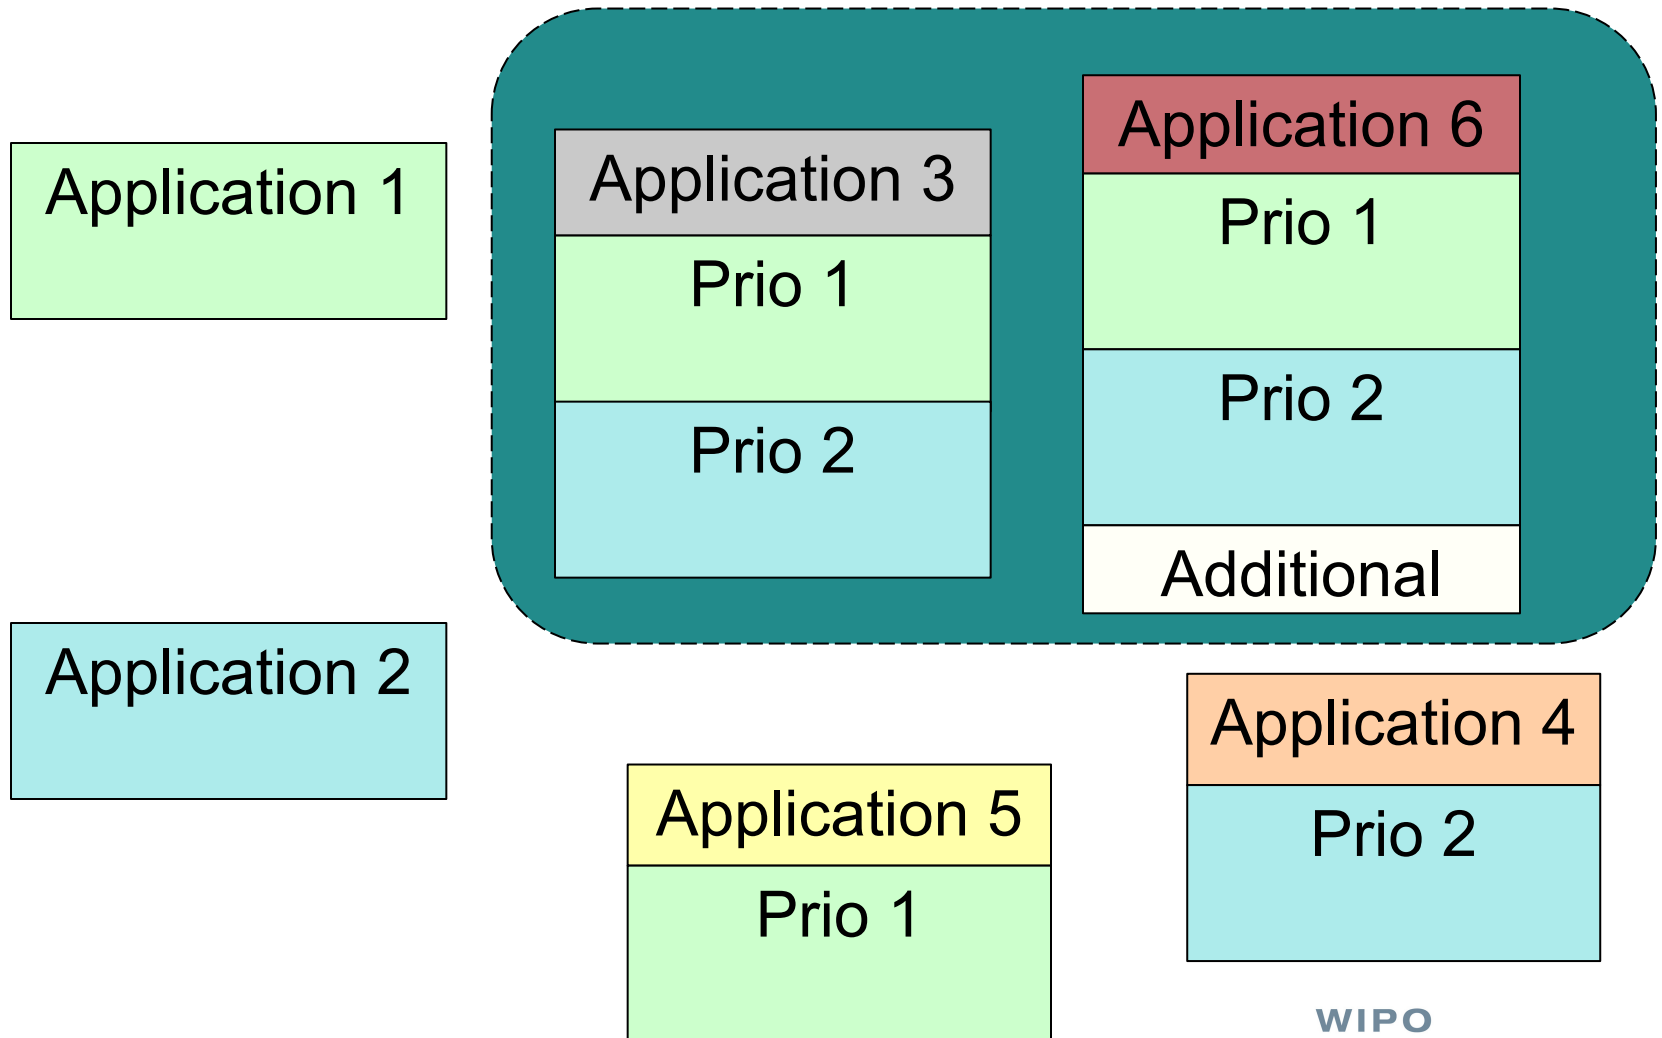

- Complex family:
 - All members of the family share at least one priority

- Extended family:
 - Any member shares at least one priority with at least one other member
 - Covers indirect sharing of priorities; is therefore the **biggest possible family**

Extended family

Simple family

Simple & PCT <> extended family?

- **Simple family:** all members share the same priorities
- **PCT family:** all members share the same PCT application number AND priorities
 - It is very likely that descriptions of family members are equal or very similar
 - "Equivalents", "also published as"
 - Ideally, family members are just translations in other languages
 - However, Paris Convention permits additions of subject matter
 - "same invention" or group of very similar inventions
- **Extended (Inpadoc) family:** biggest possible family, includes applications sharing priorities indirectly
 - It is quite likely that descriptions are different
 - More likely that they cover different but related inventions in same area of technology

Family building in databases

- Comparing priority numbers
and/or
- Comparing PCT application numbers

Sources of family information

- **EPO's INPADOC database** is major source of such family information, accessible through:
 - Espacenet, EP-Register and CCD (simple and extended families; domestic families)
 - Other free patent information databases, like Depatis, [Google Patents](#), ..
- **WIPO PATENTSCOPE**
 - aggregates **national phase entry data reported from Designated/Elected Offices** (obligation as from July 1, 2017; rule 95)
 - Proprietary family building (since 2021)
- **WIPO CASE** with proprietary family building based on application data shared by 'providing offices'; families are complex families (i.e. share at least one priority)
- **Commercial** patent databases obtain and use widely INPADOC data, and apply proprietary family building rules and data cleaning, e.g.
 - Clarivate/Derwent: WPI family
 - Questel/Orbit: Fampat family
 - ...
- Other specialized platforms, e.g. WIPO's [Pat-Informed](#) or MPP [MedsPal](#)
- India Form 3

FIG. 1

Patent family (proprietary built)

Abstract

(EN)

A method [10] of minimizing vapor transmission from a constructed permeability control infrastructure can comprise forming [12] a heterogeneous hydrated matrix within the constructed permeability control infrastructure, the constructed permeability control infrastructure comprising a permeability control impoundment defining a substantially encapsulated volume. The heterogeneous hydrated matrix includes a particulate solid phase and a continuous liquid phase which is penetrable by a vapor having a permeation rate. The constructed permeability control infrastructure is operated [14] to control the permeation rate by manipulating [16] an operational parameter of the constructed permeability control infrastructure. Additionally, the vapor can be impeded during operating sufficient to contain the vapor within the constructed permeability control infrastructure.

(FR)

La présente invention concerne un procédé [10] de réduction au minimum de la transmission de vapeur depuis une infrastructure de contrôle de perméabilité construite qui peut comprendre la formation [12] d'une matrice hydratée hétérogène dans l'infrastructure de contrôle de perméabilité construite, l'infrastructure de contrôle de perméabilité construite comprenant une barrière de contrôle de perméabilité définissant un volume sensiblement encapsulé. La matrice hydratée hétérogène comprend une phase solide particulaire et une phase liquide continue qui est pénétrable par une vapeur ayant un taux de perméation. L'infrastructure de contrôle de perméabilité construite est mise en œuvre [14] pour contrôler le taux de perméation par manipulation [16] d'un paramètre opérationnel de l'infrastructure de contrôle de perméabilité construite. De plus, la vapeur peut être retenue pendant un fonctionnement suffisant pour contenir la vapeur dans l'infrastructure de contrôle de perméabilité construite.

Family table

Does **NOT** mean simple and extended family CASE families are complex families

Legal obligations for disclosing family information

- Some jurisdictions, for example India, systematically require applicants to disclose and update family information
- Disclosure to be found in IN dossier as 'Form 3'
- Represents up to now the most comprehensive source of family information
- Can be retrieved by searching IN application number in Indian register inPASS

Challenges

- **Don't worry** – IP5 family members are included in all sources plus many other major jurisdictions
- Limitations exist mostly for regional cooperation because many medium and smaller IPOs don't share bibliographic data with database hosts
- **No source that permits to select only PCT family**
- Essential for work-sharing (to be able) to identify the members of the PCT family
- Family members linked to other PCT applications are less useful or not useful at all

Families within one jurisdiction

- National, regional, PCT jurisdictions
 - National families
 - Domestic families

Origin of patent families - reasons

There are **various reasons** for patent family relations between **distinct applications**/filings:

- A. Patent protection is territorial, i.e. inventors/investors may have to seek protection in different jurisdictions (“extensions”)
- B. An application may have certain deficiencies
 - Lack of unity
 - Flaws or gaps of the disclosure (description, drawings)
- C. Further improvements of an invention

Claiming national priorities

US '138 claims
3 national
priorities

Domestic second filings

„Continuation (in part)“

- New national/local application claiming priority of one or several earlier national/local applications
- "in part": **Additions of technical subject matter to initial disclosure** of parent (priority) application or other amendments are **permitted**, and usually **intended**, only part of the new application originates in earlier application
- (Up to 12 months after filing date of claimed priority)
 - Remedy for flaws in first application
 - Opportunity to specify further improvements of an invention

Patent of addition (in some jurisdictions)

- Improvement of original invention of parent patent
- **Unity** with parent patent to be given; i.e. as if further independent claim of parent patent
- Depends on validity of parent patent
- Request possible up to 18 months after filing of parent patent

Domestic second filings

Division (and US 'continuations')

Paris Art. 4 G (1)

- E.g. for healing a lack of unity: **mandatory division**
- Permits filing of an application with new set of claims based on previously filed disclosure (i.e. **no additions to initial disclosure** permitted): **voluntary division**

Paris Art. 4 G (2)

- Initial disclosure (parent application) may comprise several inventions
- Lack of unity is given only if different inventions are "claimed", i.e. if covered explicitly by claims
- Strategic approach by some applicants
- Divisions are possible usually anytime as long as parent application is pending (EPC: only within 24 months after 1st office communication)
- Retains application date and claimed priorities; no explicit priority claim type relation to parent application

Further sources of family information

- National registers (e.g. EP-Register, US PAIR) include patent family information on national level (domestic families, national families (continuation in part, **divisions**; US continuations)

EP-Register - divisions

Parent application(s) 

EP04771314.4 / ➤ [EP1651658](#)

Divisional application(s)

EP14194507.1 / ➤ [EP2896397](#)

The date of the Examining Division's first communication in respect of the earliest application for which a communication has been issued (EP20040771314) is 20.10.2011

US-PAIR: national family/divisions

Summary: multiple family members from same country

- When do we have multiple family members from same jurisdiction? In case of:
 - Divisional applications (US continuations)
 - Continuations in part
 - Several PCT applications in same family
- These reasons may co-occur!
- You need to understand/identify the reason(s) and select the proper family members for work-sharing purposes
- **Don't worry:** only some 10-20% of PCT applications are affected
- Temporary problem until comprehensive PCT families can be selected in family tables

Thank you
