What is the Patent Search?

Patent search is not only prerequisite step in patenting procedure but also essential work in conjunction with many business activity, including research, manufacturing, marketing, etc. Patent search is to search and analyze relevant patents in product development step or prior to patent application process so that you can make sure the patentability of your invention and get current technology information and future trend of specific technology area. Also, it helps you to avoid a duplicated research and to invest your money to safe market having no legal problems related to patent.

The Kind of Patent Search (1)

Theme Search

Theme searches provide the overview of patents related to your field of interest. These searches are helpful to detect the recent trend of your technology area and to establish your R&D direction

Patentability Search

Patentability search is the first step of patenting process. A patentability search surveys patents filed in each national intellectual property office to check whether there exists inventions similar to yours.

Infringement Search

Infringement search is to check whether patents which can be infringed by your product launched newly in a certain country exist or not in that country.

The Kind of Patent Search (2)

Invalidity Search

When you intend to make some claims of a particular patent invalid, the invalid search can provide some prior art references that disclose claims that are infringed by the subject disclosure.

Family patent / Legal status search

Patent family search provide a list of all countries in which a particular patent was filed.

Legal status search gives the legal progressing status of a particular patent .

The Process of Patent Search

1. Clarify the Purposes of search

Refer to the kind of search

2. Decide the Extents of Search

KR,US,JP,EP.....

*WIPS,
USPTO,Delphion,
IPDL, Espacenet*

*Text file, patent copy,
Bibliography, etc*

3. Select Keywords

*Title, Abstract,
Claims, etc*

4. Make Search Queries

5. Searching & Reviewing

7. Search Results & Extracting data

6. Reform the Search Queries

The Basics of Creating & Refining Search Queries (1)

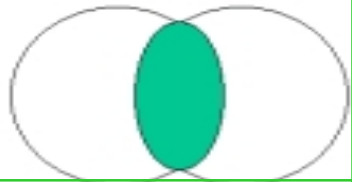

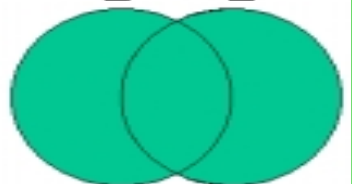

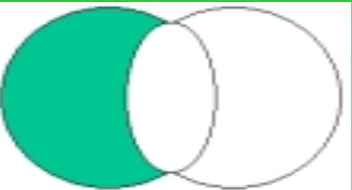

1. Extension of the range of search keywords(Wildcards)

A wildcard is a symbol that stands for an unspecified number of characters in a queries. Right-hand truncation used in the end of words is generally applied in the most of database. This allows you to retrieve words that begin with that specific character string but have an unknown variety of characters at the end.

Kind	Wildcards	Meaning	Example
Full extension	* (Asterisk)	Represent to unlimited characters	file* : Retrieves file, files, etc.
Partial extension	? (Question mark)	Represent to only one character	wom?n : retrieves woman, women, etc.

The Basics of Creating & Refining Search Queries (2)

2. Boolean operators

Function	Meaning	Format
Logical Product	Two terms must be existed	 a AND b
Logical Sum	Any one term or two terms must be existed	 a OR b
Logical Negation	A specific term following "NOT" must be excluded	 a NOT b
Order of Precedence	An operator within brackets has a priority	(a OR b) AND c

The Basics of Creating & Refining Search Queries (3)

3. Adjacency operators

Format	Meaning	Example
a ADJn b	"a" and "b" exist in the same order with the input queries' order in a sentence and there are the same or less than the "n" words between "a" and "b"	Automobile ADJ2 System : <u>Automobile</u> rear suspension <u>system</u> , <u>Automobile</u> heating <u>system</u>
a NEARn b	"a" and "b" exist in a sentence regardless the order and there are the same or less than the "n" words between "a" and "b"	Engine NEAR2 Control : <u>Engine</u> brake <u>control</u> , <u>Control</u> system for <u>engine</u>

The merits of the charged on-line database

- *More Patent Database Collections : Saving search time and integrated search is possible because several countries' patent database is built in together*
- *Faster and more stable search : Less number of user than Free DB and high-quality internet infrastructure*
- 3. *Detailed and several search method : Full text search and free queries are available*
- 4. *Save search results : You can manage your search results*
- 5. *Easy to download and obtain patent document copy*
- 6. *Various and useful supplementary functions : Patent analysis tool, Searched patent management, Newly published patent informing service, etc.*

Welcome to WIPSGLOBAL Patent Search !

- WIPSGLOBAL (Worldwide Intellectual Property Search) is a site for patent information search all over the world.
- We obtain patent data (US, EP, PCT, INPADOC, PAJ, KPA) from patent offices in many countries and save them with the same format in our database so that anybody can easily access to the integrated search system. WIPSGLOBAL also offers convenient additional functions such as saving query, clustering, cabinet, and patent map tool.
- To look various patent documents image on WIPSGLOBAL, you must install PI View. For details, please click 'help'. [Download PIView!](#)

3. DEVICE FOR CONTROLLING REAR SUSPENSION TOE OF VEHICLE

* Country : KR (Republic of Korea)
 * Examined Pub. Number : [2002-0043004](#) (2002.06.08)
 * Kind of Document : A (Examined Applications)
 * Applicant : KIA MOTORS CORPORATION
 * Application Number : 2000-0072398 (2000.12.01)
 * Int. CL : B62D-017/00

* Abstract :
 PURPOSE: A device for controlling a rear suspension toe of a vehicle is provided to simply control the toe by controlling a position of a trapezoid pushing element with a control handle, thereby simplifying the toe control work without using any additional control tools and reducing the toe control time.

CONSTITUTION: A device for controlling a rear suspension toe of a vehicle includes a housing(5) mounted between an inner lateral link(2) of an inner bush(1) and an outer lateral link(4) of an outer bush(3), a trapezoid pushing element(8) penetratingly mounted in the center of the housing, and a control handle(9) mounted at a rear part in the center of the housing for moving the pushing element to and fro.

(54) SEMICONDUCTOR WAFER ON WHICH RECOGNITION MARKS ARE FORMED AND METHOD FOR SAWING THE WAFER USING THE RECOGNITION MARKS
View images

- (19) Country : **US** (United States of America)
- (11) Publication Number : **20020085746** (2002.07.04) (Granted: **US6421456**) ▶ File Contents History(USPTO)
- (13) Kind of Document : **A1** (Utility Patent Application published on or after January 2, 2001)
- (75) Inventor : **SON, DAE WOO** (CHEONGNAM-CITY, KR)
LEE, YOUN SOO (CHEONGNAM-CITY, KR)
KIM, BYUNG MAN (CHEONGNAM-CITY, KR)
- (73) Assignee : -
- (57) Abstract :

On a semiconductor wafer, recognition marks are fabricated on the crossing points of scribe lines for the purpose of proper wafer alignment in wafer sawing process. Since the recognition mark has a distinctive pattern that is distinguished from other circuit patterns on the chip, the recognition mark can be easily recognized by a camera in a sawing apparatus, and reduce the chance of wafer misaligning. When a part of circuit pattern on the semiconductor chip is used for the alignment purpose, the chance of wafer misalignment relatively high due to the similarity between the part chosen and other parts of the circuit patterns. The present invention also provides a method for sawing the wafer using the recognition marks.

(57) Exemplary Claim : [Show all \(11\) Claims](#)

1. A method of sawing semiconductor wafer to reduce warping thereof, the method comprising the steps of:

- forming a gate dielectric layer on a first face of the semiconductor wafer;
- forming a first layer of a first material on an opposing second face of the semiconductor wafer wherein the first material comprises polysilicon so that the first face of the semiconductor wafer and the first layer of the first material are separated by the gate dielectric layer;
- removing the second layer of the first material from the second face of the semiconductor wafer; and
- patterning the first layer of the first material to form a plurality of transistor gate electrodes.

2. A method according to claim 1 wherein the step of removing the second layer of the first material is followed by the step of:

- forming an electronic device on the first face of the semiconductor wafer.

3. A method according to claim 1 wherein the step of removing the layer of the second material is followed by the step of patterning the first layer of the first material to form the plurality of transistor gate electrodes.

4. A method according to claim 1 wherein the removing step comprises the steps of:

- forming a layer of a second material on the first layer of the first material opposite the first face of the semiconductor wafer;
- etching the second layer of the first material from the second face of the semiconductor wafer using the layer of the second material as an etching mask to protect the first layer of the first material; and
- removing the layer of the second material from the first layer of the first material.

(72) Inventor : CHOI, JIN GI; HA, MIN SEOK; JUNG, CHEOL

(71) Applicant : SAMSUNG ELECTRONICS CO., LTD.

(57) Abstract : PURPOSE: A method for manufacturing a semiconductor substrate is provided to prevent a bending phenomenon of a wafer by removing a material layer formed on a lower surface of a wafer.

CONSTITUTION: A gate dielectric layer is formed on a wafer(10). The first material layer(20) is formed on the gate dielectric layer and a lower surface of the wafer(10). The second material layer(30) is formed on the first material layer(20) of the gate dielectric layer. The first material layer(20) formed on the lower surface of the wafer(10) is etched by using the second material layer(30) as an etching mask. The second material layer(30) is removed. A multitude of transistor gate electrode is formed by patterning the first material layer(20).

in/newmar-julie

Patents from 1790 through 1975 are searchable only by Patent Number and Current US Classification!

Field Code	Field Name	Field Code	Field Name
PN	Patent Number	IN	Inventor Name
ISD	Issue Date	IC	Inventor City
TTL	Title	IS	Inventor State
ABST	Abstract	ICN	Inventor Country
ACLM	Claim(s)	LREP	Attorney or Agent
SPEC	Description/Specification	AN	Assignee Name

2. Espacenet (<http://ep.espacenet.com>)

The image shows two overlapping browser windows of the Espacenet website. The top window displays the 'Quick Searches' section, which includes three search options: 'Simple Text', 'View a patent application', and 'Company name search'. A red circle highlights the 'Simple Text' search box, and a red callout box labeled 'Quick Searches' points to it. The bottom window shows the 'Search in patents throughout the world' form, which contains various search criteria. A red circle highlights the 'Title' field, and a red callout box labeled 'Field Search' points to it. The search form includes fields for Title, Title or Abstract, Publication Number, Application Number, Priority Number, Publication Date, Applicant, Inventor, EC Classification, and IPC Classification, each with an example value. The 'Search' and 'Clear' buttons are at the bottom of the form.

3. IPDL (<http://www.ipdl.jpo.go.jp>)

PAJ(Patent Abstract of Japan) Search

Text Search

The screenshot shows the top of the IPDL website. At the top left is the Japan Patent Office logo. The main header reads "Japan Patent Office Industrial Property Digital Library". Below this, there are navigation links for "Japan Patent Office Home Page" and "Japanese", along with the date "2033-10-29 Updated" and an "Access Total" button. The main content area is titled "Searching PAJ" and includes "MENU", "NEWS", and "HELP" buttons. A "Text Search" button is highlighted, with a red arrow pointing to the label "Text Search". Below the button, there is a search input field with the placeholder text "Applicant, Title of invention, Abstract --- e.g. computer semiconductor". A note below the field states: "If you use the AND/OR operation, please leave a SPACE between keywords. One letter word or Stopwords are not searchable." There are also "AND" dropdown menus and a "Number Search" button to the right.

Number Search

The screenshot shows the "Number Search" interface. It features a "Number Search" button at the top left, with a red arrow pointing to the label "Number Search". Below the button, there is a search input field with the placeholder text "Enter Number --- e.g. 07-123456 2000-123456". A note below the field states: "If you use the OR operation please leave a SPACE between numbers." There are radio buttons for "Application number", "Publication number", "Patent number", and "Number of appeal against examiner's decision of rejection". Below the radio buttons is another search input field. At the bottom, there are "Search" and "Stored data" buttons.
