This paper addresses some of the key issues and strategies that IPA us tralia has put in place to ensure that SMEs are aware of the steps to take towards the effective commercialization of their IP.

IPAustralia's workhowe verisnot just limited towork in the SME sector, it covers many different keytarget are assuchast hetertiary sector, business advisers, schools and government to name a few. The opportunity to discuss these issues with the two presenters from Australia will be available to you over the course of the workshop.

So -whatissuesdoSME/startupsfaceinusingIP

BeforeyoucanaddresstheissueofbestpracticeinusingIPinanybusinesstherearea fewissuesyouneedtounderstand:

- The currentle vel of knowledge relating to IP and how this impacts on the success of their business;
 - ThelevelofuseofIPwithintherelevantsector;
 - The stage at which IP is actually used as a driver for the business; and
 - The 'economic' environment in which ich these ctoroperates and the challenges that result from this.

AtIPAustraliawecallthisthe'lifecycleofIP'.

In 1998 IP Australia commissioned amajor market research project into the SME/startup sector to address the level of understanding of I Pandhowitis used in business. The results were surprising. The research clearly demonstrated that the rewas very little or no knowledge of IP among most companies surveyed. It also showed that the advice they received from much of the broad based business advisory sector (e.g., account ant sandgeneral practice lawyers) was at a very general level and offered little guidance in terms of IP management and commercialization. Compounding this was a clear trend to only think of IP management after companies shad already invested in business planning, prototyping, taken on financial commitments, marketing and long -term business relationships. Often making this

Whatarethekey IPskills/knowledgerequiredintheSMEsector

IPmanagementandcommercializationcanbehighlytechnicalandspecializedin nature, howeveritneed not bethat difficult for SME stounderstand and manage if they implemented the disciplines of developin gbusiness plans, market strategies and sales plans.

Once an SME has developed an understanding of what IP is, they then need to develop an understanding of how they can be nefit from it. This means:

- DevelopingaworkingunderstandingofthevalueofIPtotheirbusinessandthe philosophiesbehindIPlegislationandtheformalrightsgranted.
- UnderstandingthedifferencebetweenIPrigh tsversusphysicalrights.
- TheactsandlegislationprotectingIPrights.

- IdentifyingthedifferenttypesofIPadvicetheywillneedandwhatquestionsdo theyneedtoasktheiradviser.

Oncesome of the basicski lls are understood, SME scanbegin the process of the managing their IP and understanding both the consequences and opportunities that exist for their business.

The journey of using and understanding IP does not stophere. They will need to develop skill sandanunderstanding of all the forms of IP available to the mincluding:

- domainnames
- protectingconfidentialinformation
- licensingandassignment
- infringementofIPrights
- conductingIPaudits
- valuationofIP
- integratingIPintotheirbusinessmanageme ntprocesses
- financingandcommercializingIP
- taxation
- governmentincentives, and
- toolsavailabletothemsuchasIPdatabasesandinternetresources.

These are as will not be discussed in detail here, but it is important to note that IP Australia and oth ergovernmentagencies have programs and product sin place to educate SMEs/start-ups in the management and commercialization of IP. I would be happy to discuss these with you over the course of the workshop.

Whatisbestpractice

Havingsetthesceneon theapproaches IPA ustraliahas undertaken in theareas of start up and SMEs, an Australian perspective of what is best practice is covered in more detail below. This is a relative new area of focus for Government and IPA ustralia, and there is a very little difference in the issues of IP management and commercialization facing SMEs? start-ups.

Whatisastart -up?

Theywillnormallyhaveaclearbusinesscharterdedicatedtocommercializing aparticularorstandaloneprojectandclearandearlyfinancialreturntoallinvestorsi.e.,IT startupwithaparticula rsoftwareapplication.

WhatisaSME?

In Australia an SME is defined as a company or group consisting of between 10 and 100 employees in any field of business endeavor.

InAustralia, this is IPAustralia's view of best practice in using IP for SMEs/start -ups. Businessis always evolving and the environment in which these companies operate will always be one of change. The need for SMEs/start -ups to keep a breast of the changes will be an ongoing challenge for IPA ustralia and other government agencies to ensure that this innovative sector is well educated in IP management and commercialization.
