

STANDARD ST.37

RECOMMENDATION FOR AN AUTHORITY FILE OF PUBLISHED PATENT DOCUMENTS

Version 2.2

*Revision approved by the Committee on WIPO Standards (CWS)
at its ninth session on November 5, 2021*

STANDARD ST.37

RECOMMENDATION FOR AN AUTHORITY FILE OF PUBLISHED PATENT DOCUMENTS

Version 2.2

*Revision approved by the Committee on WIPO Standards (CWS)
at its ninth session on November 5, 2021*

INTRODUCTION

1. This Standard defines data elements to constitute an authority file of patent documents, as well as its structure and format.
2. The primary purpose of the authority file generated by an industrial property office (IPO) is to allow other IPOs and other interested parties to assess the completeness of the available patent documentation. An authority file may also be used to capture bibliographic information for patents which form part of the PCT Minimum Documentation set¹.
3. In order to allow consistency checks, the authority file should contain the list of all publication numbers assigned by the IP office. This may include publication numbers for which no published document is available – this can be the case for applications withdrawn shortly before the publication or for destroyed documents – as well as publication numbers for which the publication contains only bibliographic data.

DEFINITIONS

4. For the purposes of this Standard:
 - (a) the term “patent documents” includes patents for inventions, plant patents, design patents, inventors’ certificates, utility certificates, utility models, patents of addition, inventors’ certificates of addition, utility certificates of addition, and published applications therefor. “Documents” means patent documents, unless otherwise stated;
 - (b) the terms “publication” and “published” are used in the sense of making available:
 - (i) a patent document to the public for inspection or supplying a copy on request; and
 - (ii) multiple copies of a patent document produced on, or by, any medium (e.g., paper, film, magnetic tape or disc, optical disc, online database, computer network, etc.); and
 - (c) according to certain national industrial property laws or regulations or regional or international industrial property conventions or treaties, the same patent application may be published at various procedural stages. For the purpose of this standard, a “publication level” is defined as the level corresponding to a procedural stage at which normally a document is published under a given national industrial property law or under a regional or international industrial property convention or treaty.

WIPO Standard ST.10/C	Presentation of Bibliographic Data Components
WIPO Standard ST.16	Recommended Standard Code for the Identification of Different Kinds of Patent Documents
WIPO Standard ST.36	Recommendation for the Processing of Patent Information Using XML (eXtensible Markup Language)
WIPO Standard ST.96	Recommendation for the Processing of Intellectual Property Information Using XML (eXtensible Markup Language)

RECOMMENDATIONS

6. An authority file is generated by the IPO and contains a list of all patent documents published by that IPO from the first publication onwards. It should also include document numbers which were allocated but for which no published document is available (see paragraphs 23 to 26 below).

7. For practical reasons, an authority file may not include documents published during a certain period (not longer than two months) before the date when the authority file was generated by the IPO. This period depends on the document processing practices of the Office and, should an IPO submit a definition file as laid down in paragraphs 36 and 37 below, then it is recommended to indicate there the date of the publication of the latest document listed in the authority file.

DATA ELEMENTS

8. For each publication, the authority file should contain the following minimum data elements to uniquely identify all types of patent documents as originally published by the IPO:

- (a) two-letter alphabetic code of the IPO publishing the document (publication authority);
- (b) publication number;
- (c) kind code of the patent document (kind-of-document code); and
- (d) publication date.

9. In addition to the elements listed above, the authority file may contain the following data elements:

- (a) publication exception code (for example to identify withdrawn or missing documents);
- (b) priority application identification of the corresponding publication, which should contain the following sub-elements:
 - i. two-letter alphabetic code of the IPO publishing the priority application;
 - ii. priority application number;
 - iii. kind-of-document code of the priority application; and
 - iv. filing date of the priority application.
- (c) application identification of the corresponding publication, which should contain the following sub-elements:
 - i. two-letter alphabetic code of the IPO publishing the application;
 - ii. application number; and
 - iii. filing date.
- (d) indication of whether the abstract, description, claims of a publication are text-searchable, through selection of one of the following codes:
 - “N” – Not available
 - “U” – Unknown
 - two-letter language code(s) in which the searchable text is available, either in the original language or as an official translation

10. Publication exception code (as per paragraph 9(a) above) should be always included for the documents, for which the complete publication in machine-readable form is not available (see paragraphs 23 to 26 below). Otherwise, the data element “publication exception code” should not be populated.

11. The provision of the optional data elements indicated in paragraphs 9(b) to 9(d) above remains within the discretion of the IPO generating the authority file.

12. The list of documents in the authority file should be sorted firstly by publication number, secondly by type of document (kind code), thirdly by publication date and (optionally) fourthly by publication exception code and fifthly by priority number.

13. For the cases where a publication number has been allocated but no document has been published, data elements “kind code” and “publication date” may not be populated.

Field formatting

14. All elements and sub-elements listed in paragraphs 8 and 9 above must be recorded in separate fields.

15. Examples of text format and XML file structures are provided in Annexes II to IV.

Publication authority

16. The two-letter alphabetic code for the publication authority – country or region of the IPO generating the authority file – should follow recommendations of WIPO Standard ST.3.

Publication number

17. Any non-alphanumeric characters – for example, those used as separators, such as dots, commas, dashes, slashes, spaces – should preferably be removed from the publication number, while generally the publication number should be following the recommendations of WIPO Standard ST.6.

Kind code

18. Different kinds of patent documents should be identified following the recommendations of WIPO Standard ST.16. If the IPO uses kind-of-document codes which do not follow the recommendations of WIPO Standard ST.16, the definitions of such codes should be provided in the definition file (see paragraphs 36 and 37 below).

19. If no kind of patent document code was allocated or it is unknown, the corresponding data element “kind code” may not be populated.

Language code

20. The two-letter code which identifies the language that the text is provided in should follow the recommendations of WIPO Standard ST.96, ExtendedISOLanguageCodeType, which is based on International Standard ISO 639-1 “Codes for the representation of names of languages – Part 1: Alpha2-code”;

Publication date

21. The publication date should be presented in accordance with paragraph 7(a) of WIPO Standard ST.2. For example, ‘20170602’ for ‘June 2, 2017’.

22. If the publication date is unknown to the IPO generating the authority file, the corresponding data element “publication date” may not be populated.

Publication exception code

23. The publication exception code should be used for publication numbers for which the complete publication is not available in machine-readable form.

24. The following single-alphabetic letter codes should be used to indicate the reason why the complete published document, for which the corresponding number is assigned, is not available:

C	Defective documents.
D	Documents deleted after the publication.
E	Publication number allocated by the IPO representing a PCT national/regional phase entry (for example Euro-PCT). No corresponding document published. A Euro-PCT application is an international (PCT) patent application that entered the European regional phase.
M	Missing published documents.
N	Not used publication number,

	for example, when publication numbers have been issued, but for some reason have not been allocated to any publication. See also paragraph 26 below.
P	Documents available on paper only.
R	Reissued publications.
U	Unknown publication numbers. For example, when during compilation of the authority file certain publication numbers have been found in the database, but the corresponding documents are missing without known cause. Typically this code can indicate a database error that requires further analysis.
W	Applications (or patents), which were withdrawn before the publication; this can include lapsed or ceased patents and might depend on national patent law regulations.
X	Code available for individual or provisional use by an IPO.

25. It is recommended to list only the numbers assigned by the IPO, but in case of small gaps in the numbering sequence (less than 1000 consecutive publication numbers), the IPO may use the publication exception code “N” to identify the numbers, which were not used.

26. The use of codes “N”, “W” and “X” should be described in the definition file (see paragraphs 36 and 37 below).

Priority application identification

27. The recommendations for data elements, as indicated in paragraphs 16 to 22 above, should be applied mutatis mutandis to all sub-elements of “priority application identification” element.

28. Priority application numbers should be indicated in accordance with paragraphs 12 and 13 of WIPO Standard ST.10/C.

Application Identification

29. The recommendations for data elements, as indicated in paragraphs 16 to 22 above, should be applied mutatis mutandis to all sub-elements of “application identification” element.

30. Application numbers should be provided in the same format as it appeared on the original patent publication issued by the IPO. If the IPO uses application number formats in the authority file that are different from those used on the original publication, an explanation of the format should be provided in the definition file.

Availability of a publication in a text-searchable format

31. The availability of the abstract, description and/or, claims of a publication in a text-searchable format may be indicated in the authority file using the appropriate codes.

32. The availability in text-searchable format of each section of a publication must be identified in the authority file with a code “N” for Not available, or a “U” for Unknown (availability) or the two-letter language code(s) for each corresponding language made available by the Office, either as the original language or an official translation.

RECOMMENDED STRUCTURE AND FORMAT OF THE AUTHORITY FILE

33. It is recommended to provide a single file for all publication numbers listed in the authority file.

34. If generating a single file proves impractical due to the resulting file size, the IPO may generate several files, dividing the list of publication numbers based on one of the following criteria:

- (a) Publication date (file per year or several years);
- (b) Publication level (applications, granted IP rights); and
- (c) Types of patent documents (file per kind-of-document code).

35. To improve file handling, IPO may generate an update file which includes data for the current year and the last calendar year and a static file including all older data.

Definition File

36. If some of the records included in the authority file contain information, which is not evident or easily understandable, it is recommended to provide a definition file in addition to the authority file. For example, in the definition file the IPO may:

- (a) describe specific criteria for building the authority file(s);
- (b) describe the use of publication exception codes, in particular codes “N”, “W” or “X”;
- (c) describe the use of kind-of-documents codes (see paragraph 18 above) or provide a reference to Part 7.3 of the WIPO Handbook if up-to-date information on kind-of-documents codes is already described in Part 7.3 of the WIPO Handbook;
- (d) indicate the date of the most recent document listed (see paragraph 7 above);
- (e) describe the numbering systems used or provide a reference to Parts 7.2.6 and 7.2.7 of the WIPO Handbook if up-to-date information on the numbering systems used is already described in Parts 7.2.6 and 7.2.7 of the WIPO Handbook; and
- (f) describe the codes used to indicate the availability of sections of the publication in text-searchable format.

37. To assist other IPOs and interested parties in a first assessment of the completeness of the available patent documentation, the definition file may also include an overview of the data coverage, for example indicate the number of publications per year by kind code or by publication level. Annex I contains an example of a definition file to assist IPOs in drafting their definition files.

File Format

38. The file must be encoded using Unicode UTF-8.

39. With the aim to harmonize, as much as possible, the current practices to exchange and parsing of authority files, two file formats are recommended:

- (a) XML (eXtensible Markup Language) format – to identify the content of data fields of an authority file (see paragraphs 8 and 9 above) using XML tags within an instance, either in an XML schema (as defined in Annex III) or a Document Type Definition (DTD) (see Annex IV) format; and
- (b) Text format (file extension TXT) – to identify the content of minimum data fields and the optional publication exception code element using a single text coded list, where the elements are separated by commas (preferred), tabs or semicolons and a “Carriage Return and Line Feed” (CRLF character) to represent the end of each record (as defined in Annex II). Text files are smaller in size than XML files.

40. XML is the preferred format for the purpose of this Standard, as it provides clear data element contents and allow s automatic validation of its structure and type. IPOs may use text format for simple authority files, which contain minimum data elements (as per paragraph 8 above) and, if applicable, publication exception code only; the content of each data field should be obvious.

File name

41. The name of the authority file generated by an IPO should be structured as follows:

- (a) for a single file (see paragraph 33 above) – CC_AF_YYYYMMDD, where “CC” is the ST.3 code of the IPO, “AF” means “authority file” and “YYYYMMDD” – date of the generation of the authority file.

For example,

EP_AF_20160327 – single authority file generated by the EPO on March 27, 2016; and

- (b) for each one of multiple files (see paragraph 34 above) CC_AF_{criterion information}_KofN_YYYYMMDD, where “CC” is the ST.3 code of the IPO, “AF” means “authority file”, {criterion information} is a place-holder and K is the index number of this file, N is the total number of files generated and “YYYYMMDD” – date of the generation of the authority file.

For example,

- EP_AF_A-documents_1of2_20160327 – first of two parts of the authority file generated by the EPO on March 27, 2016, this part covers applications only;

- EP_AF_B-documents_2of2_20160327 – second of two parts of the authority file generated by the EPO on March 27, 2016, this part covers granted patents only.

- (c) For the instance where multiple files are provided, and each covers a different time period, please refer to the table below for an example of recommended file naming:

CC_AF_gazetteNNXXXX_YYYYMMDD.ff	contains the authority file for publication NNXXXX where NN is the week number, XXXX is the year and ff is the file format (XML or TXT)
CC_AF_yearXXXX_YYYYMMDD.ff	contains the authority file for the year XXXX
CC_AF_YYYYMMDD.ff	contains the authority file with file format ff
CC_AF.zip	A zipped file which contains the three files above

IMPLEMENTATION OF THE AUTHORITY FILE

42. In order to ensure efficiency of the data exchange, authority files in XML format must be structured according to the XML schema (XSD) or the data type definition (DTD) file as specified in Annex III and Annex IV, respectively.

43. The update frequency for the authority file should be at least annual. The date the annual update should be provided by IPOs is March 1 each year.

44. It is recommended that IPOs generate and make available authority files covering all assigned document numbers, no later than two months after the last covered publication date. For example, an authority file with data coverage until the end of 2017 should be made available before March 1, 2018.

45. If an error is discovered in an authority file, a replacement file should be provided by the IPO as soon as possible.

[Annex I follows]

ANNEX I

EXAMPLE OF A DEFINITION FILE

Version 2.2

*Revision approved by the Committee on WIPO Standards (CWS)
at its ninth session on November 5, 2021*

DEFINITION FILE FOR XX AUTHORITY FILE

This definition file relates to the following authority file: XX_AF_20170322

Date of production

2017-03-22

Data coverage

Public XX documents from 1974-01-01 to 2016-12-31.

The XX authority file lists all XX patent and XX utility model publications.

Coverage according to document type and kind-of-document code (see [Part 7.3 of the WIPO Handbook](#) for details on kind codes):

Type	Kind Code	Total
Patent Application	A1	125.568
Patent Application	A2	96.430
Patent Granted	B1	144.879
Utility Model Application	U	24.332
Utility Model Examined	Y1	18.445

A detailed (annual) data-coverage can be found online at <http://www.XX-office.org/coverage>.

Used options

- Application information is provided where available
- Priority data not included
- Availability of abstract, description and claims of the publication in text-searchable format is provided
- Publication Exception Codes used are the following:

Publication Exception Code	Definition
D	Documents deleted after the publication.
E	PCT applications which have not been republished
M	Missing published documents
R	Reissued publications
U	Unknown publication numbers
X	Bibliographic details of filed patent applications, as announced in the Gazette published by the office
W	Applications (or patents), which were withdrawn before the publication

Remark:

R – Reissued publication

Before 2001-01-01 correction requests from applicants and proprietors at the XX office were registered and executed, but not recorded in necessary electronic formats. Therefore these so-called reissued publications are only available with bibliographic data but not as published documents.

Numbering Formats:

For details on the numbering systems used by XX office see the corresponding entries in Parts [7.2.6](#) and [7.2.7](#) of the WIPO Handbook.

[Annex II follow s]

ANNEX II

TEXT FILE (TXT)

Version 2.2

*Revision approved by the Committee on WIPO Standards (CWS)
at its ninth session on November 5, 2021*

1. The authority file text structure lists the minimum data elements, the optional publication exception code element, and the optional text-searchable abstract, description and claims indication code elements (see paragraphs 8 and 9 of Main Body) for each publication record in one line, separated by a comma (preferred), tab or semicolon and a "Carriage Return and Line Feed" (CRLF character) to represent the end of each record.
2. Data structure: <publication authority>,<publication number>,<kind-of-document code>,<publication date>,<publication exception code>,<searchable abstract code (language codes or N or U)> , <searchable description code (language codes or N or U)> ,<searchable claims code (language codes or N or U)> <CRLF>.
3. The codes "N" and "U" in the elements <searchable description code> , <searchable claims code> <searchable abstract code> mean "Not available" and "Unknown", respectively. The codes "language code", "N" and "U" are represented as a suffix of the corresponding element of the publication using one of the following options, following by a dash:
 - i. ABST - Abstract
 - ii. DESC - Description
 - iii. CLMS - Claims

If there are multiple languages available for these elements, the language indications must be separated by spaces instead of the separator referred to in paragraph 1 above. For example: ABST-en ABST-de ABST-fr, DESC-N, CLMS-N

4. This first example illustrates an authority file, produced with only the mandatory elements, represented using a TXT structure with comma separators:

```
...  
UA,1,C2,1993-04-30 <CRLF>  
UA,1,U,1995-06-30 <CRLF>  
UA,2,C2,1993-04-30 <CRLF>  
UA,2,U,1995-06-30 <CRLF>  
UA,3,C2,1993-04-30 <CRLF>
```

5. This second example illustrates an authority file, produced with the optional text-searchable abstract, description and claims indication code elements again represented using a TXT structure where the data elements are separated by a comma:

```
...  
EP,2363052,A1,20110907,W, ABST-U, DESC-U, CLMS-U <CRLF>  
EP,2363053,A2,20110907,M, ABST-en, DESC-N, DESC-N<CRLF>  
EP,2540632,A1,20130102,P, ABST-N, DESC-N, CLMS-N<CRLF>  
EP,2540632,B1,20151202, , ABST-en ABST-fr ABST-de, DESC-en, CLMS-en<CRLF>
```

[Annex III follow s]

ANNEX III

XML SCHEMA DEFINITION (XSD) FOR AUTHORITY FILE

Version 2.2

*Revision approved by the Committee on WIPO Standards (CWS)
at its ninth session on November 5, 2021*

Editorial Note by the International Bureau:

Annex III of WIPO Standard ST.37 is the set of XML schema components to represent the minimum and extended data elements of an Authority File of patent documents issued by a Patent Office. Annex III is based on WIPO Standard ST.96, including the naming convention used to identify the names of the specific data components for Authority File. Annex III includes an Appendix which is a sample XML instance of an Authority File structured according to the XML schema, according to WIPO ST.96 V4_0.

[Annex IV follow s]

ANNEX IV

DOCUMENT TYPE DEFINITION (DTD) FOR AUTHORITY FILE

Version 2.2

*Revision approved by the Committee on WIPO Standards (CWS)
at its ninth session on November 5, 2021*

Editorial Note by the International Bureau:

Annex IV of WIPO Standard ST.37 is the set of XML DTD components to represent the minimum and extended data elements of an Authority File of patent documents issued by a Patent Office. Annex IV is based on WIPO Standard ST.36, including the naming convention used to identify the names of the specific data components for Authority File. Annex IV includes an Appendix which is a sample XML instance of an Authority File structured according to the XML DTD.

```
<?xml version='1.0' encoding='UTF-8' ?>
```

```

```
** 2021-08-24: Revision of the main body, annexes and appendixes of ST.37 approved by the  
Committee on WIPO Standards (CWS) at its ninth session comprising:
```

```
* (i) added elements: <searchable-abstract-code?>, <searchable-description-code?>,  
<searchable-claims-code?>
```

```
* (ii) added attributes @code to be used with <not-searchable-indicator>, referenced by  
elements listed in (i)
```

```
* (iii) added element <searchable-language-code>, referenced by the elements listed in (i)
```

```
* (iii) changed values of grouped-af-indicator to 'true' and 'false' which are true boolean  
values
```

```
*
```

```
* 2019-07-02: Revision of Annex IV was approved by the Committee on WIPO Standards (CWS) at  
its seventh session comprising:
```

```
* (i) group-category renamed grouped-af-indicator and is now a list of values 'yes' and  
'no'
```

```
* (ii) backup-category renamed update-af-category
```

```
* (iii) additional-comment renamed comment-text
```

```
*
```

```
* 2018-10-19: Revision of Annex IV was approved by the Committee on WIPO Standards (CWS) at  
its sixth session.
