**INTERNATIONAL SEARCH REPORT**  
(PCT Article 18 and Rules 43 and 44)

Applicant's or agent's file reference <b>P00017</b>	<b>FOR FURTHER ACTION</b>	see Form PCT/ISA/220 as well as, where applicable, item 5 below.
International application No. <b>PCT/EP2009/060890</b>	International filing date (day/month/year) <b>24/08/2009</b>	(Earliest) Priority date (day/month/year) <b>25/08/2008</b>
Applicant <b>RATIOPHARM GMBH</b>		

This international search report has been prepared by this International Searching Authority and is transmitted to the applicant according to Article 18. A copy is being transmitted to the International Bureau.

This international search report consists of a total of 4 sheets.  
 It is also accompanied by a copy of each prior art document cited in this report.

**1. Basis of the report**

a. With regard to the language, the international search was carried out on the basis of:

the international application in the language in which it was filed  
 a translation of the international application into \_\_\_\_\_, which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b))

b.  This international search report has been established taking into account the rectification of an obvious mistake authorized by or notified to this Authority under Rule 91 [Rule 43.6(a)(1)].

c.  With regard to any nucleotide and/or amino acid sequence disclosed in the international application, see Box No. II.

2.  Certain claims were found unsearchable (See Box No. II)

3.  Unity of invention is lacking (see Box No. II)

4. With regard to the title,

the text is approved as submitted by the applicant  
 the text has been established by this Authority to read as follows:

5. With regard to the abstract,

the text is approved as submitted by the applicant  
 the text has been established, according to Rule 58.2(b), by this Authority as it appears in Box No. IV. The applicant may, within one month from the date of mailing of this international search report, submit comments to this Authority

6. With regard to the drawings,

a. the figure of the drawings to be published with the abstract is Figure No. \_\_\_\_\_

as suggested by the applicant  
 as selected by this Authority, because the applicant failed to suggest a figure  
 as selected by this Authority, because this figure better characterizes the invention

b.  none of the figures is to be published with the abstract

C. DOCUMENTS CONSIDERED TO BE RELEVANT		
Category*	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
A	<p>WO 2007/143483 A (SMITHKLINE BEECHAM CORP [US]; WHITEHEAD BONNIE F [US]; HO PETER T C [U] 13 December 2007 (2007-12-13) page 8, paragraph 3; table 1</p> <p>-----</p>	1-9
A	<p>WO 2006/113649 A (SMITHKLINE BEECHAM CORK LTD [IE]; CARTER BARRY HOWARD [US]; CAMPBELL D) 26 October 2006 (2006-10-26) cited in the application the whole document</p> <p>-----</p> <p style="text-align: center;">-/--</p>	1-9

Further documents are listed in the continuation of Box C.

See patent family annex.

No	Ctr	Title	PubDate	Int.Cl.	Pub.No	Applicant	Inventor
1.	WO	WO/2013/132535 - ELECTRIC BICYCLE	12.09.2013	B62M 6/00	2/001578	PANASONIC CORPORATION	KAWAKAMI, Masafumi

Provided is an electric bicycle configured so that, while production cost is prevented from increasing and an increase in the size of a hanger is kept to a minimum, the diameter of the joining sections of a crankshaft where the crankshaft is joined to crank arms can be increased, and the torque sensor can be installed within a hanger. A crankshaft (17) is configured so as to be divided into a crankshaft body (17A) which has a torque sensor (23) disposed on the outer peripheral side thereof and into an auxiliary crankshaft (17B) which is connected to one side of the crankshaft body (17A). Also, the diameter (D1) of the joining section of the auxiliary crankshaft (17B) where the auxiliary crankshaft (17B) is joined to a crank arm (18B) and the diameter (D3) of the joining section of the crankshaft body (17A) where the crankshaft body (17A) is joined to a crank arm (18A) are formed to be greater than the diameter (D2) of the connecting section of the crankshaft body (17A) where the crankshaft body (17A) is connected to the auxiliary crankshaft (17B).

2.	US	20130231810 - INTEGRATED ANTI-THEFT DEVICE FOR AN ELECTRIC BICYCLE	05.09.2013	B62M 6/00	13777116	GM GLOBAL TECHNOLOGY OPERATIONS LLC	GARCIA Pierre-Olivier
----	----	--------------------------------------------------------------------	------------	-----------	----------	-------------------------------------	-----------------------

A drive unit for an electric bicycle comprising an electric motor and an energy storage device is provided. The drive unit includes a locking mechanism for locking the energy storage device and a control device. The control device is operatively connected to an actuator of the locking mechanism for the energy storage device. The actuator is fastened detachably to the drive unit. The control device is configured to evaluate signals received via a terminal in order to release or block one function of the drive unit as a function of at least one received signal. An electric bicycle, a method for operating an electric bicycle and a computer readable medium also are provided.

3.	US	20130228406 - Brake operating device of electric bicycle with sensor	05.09.2013	B62L 3/02	13410261	TSAI SZU-FANG	TSAI SZU-FANG
----	----	----------------------------------------------------------------------	------------	-----------	----------	---------------	---------------

A brake operating device of an electric bicycle is provided with a brake lever including a projecting plate at one end, and a bifurcated cable anchoring member pivotably secured to the projecting plate; a magnetic member adhered to one side of the cable anchoring member; a housing pivotably secured to the brake lever and including a hydraulic cylinder and a cylindrical socket including an opening distal the brake lever, and internal threads proximate the opening; a spring depressible sensor including a sensing member disposed in the socket, and an electric wire extending from the sensing member; a hollow threaded fastener adjustably threadably secured to the internal threads of the socket to engage the sensing member; and a cylindrical member releasably mounted proximate to the opening and secured to the fastener. The electric wire passes the fastener and leaves the housing.

4.	US	20130228405 - BRAKE OPERATING DEVICE OF ELECTRIC BICYCLE WITH HALL-EFFECT SENSOR	05.09.2013	B62L 3/02	13410244	Tsai Szu-Fang	Tsai Szu-Fang

Title (EN) AUTOMATIC TRANSMISSION FOR **ELECTRIC BICYCLE**  
 (FR) TRANSMISSION AUTOMATIQUE POUR BICYCLETTE ELECTRIQUE

Abstract: (EN) There are provided an automatic transmission for an **electric bicycle** comprising a mechanical gear shifting means and an electronic gear shifting means for mechanically and electronically shifting an output of the motor according to a magnitude of friction force between the wheel and ground and transferring the shifted output of the motor to the driving member; a moving housing in which the motor, the driving member, the power transmitting means, the mechanical and electric gear shifting means are mounted; a fixed housing which is fixedly disposed at an outer side of the moving housing; and a first rotational shaft which penetrates through the driving member, the moving housing, and is rotatably fixed to the fixed housing, wherein, while the moving housing is revolved with the rotational shaft in the center according to the magnitude of load exerted on the wheel of the bicycle, the output of the motor is changed through the mechanical and electronic gear shifting means and then transferred to the driving member.

(FR) L'invention porte sur une transmission automatique de bicyclette électrique, cette transmission comprenant

# CLIR – Supervised mode – adjustment of terms and IPC

The image illustrates the CLIR interface in supervised mode, showing the process of adjusting terms and IPC. The interface consists of several overlapping windows and sections:

- Language Selection Bar:** Located at the top, it contains buttons for various languages: English, German, Spanish, French, Japanese, Korean, Portuguese, Russian, Chinese, Italian, Swedish, Dutch, and IPC. The IPC button is highlighted in the top-most window.
- IPC Filter:** A section on the left side of the interface, showing a list of terms and their corresponding IPC codes. The terms listed are: B01B OR, OR F23 C, OR H01 C.
- Domains [ELEC.ENG]:** A dropdown menu showing the selected domain, which is ELEC.ENG.
- Term Lists:** The main area of the interface displays a list of terms in a selected language. The terms are:
  - Spanish: "energía solar" OR "células solares" OR "celdas solares" OR "eléctrica solar" OR "energía eléctrica solar"
  - French: "cellules solaires" OR "énergie solaire" OR "piles solaires" OR "photopiles" OR "énergie solaire" OR "alimentation solaire" OR "installation solaire" OR "courant solaire" OR "électrique solaire" OR "centrale électrique solaire" OR "énergie"
  - German: "Solarzellen" OR "Solarenergie" OR "Sonnenenergie" OR "Solaranlage"
  - English: "solar power" OR "solar cells" OR "solar electric power" OR "solar energy" OR "solar plant"

(54) Title: CANCER TREATMENT METHOD

(57) Abstract: The present invention relates to a method of treating cancer in a mammal by administration of pyrimidine derivatives and quinazoline derivatives. In particular, the method relates to a method of treating cancer by administration of 5-[4-[(2,3-dimethyl-2H-indazol-4-yl)methylamino]-2-pyrimidinyl]amino]-2-methylbenzenesulfonamide or salts or solvates thereof, and N-[3-chloro-4-[[3-fluorobenzoyloxy]phenyl]-6-[5-[[[2-(methanesulphonylthio)amino]methyl]-2-furyl]-4-quinazolinamine, or salts or solvates thereof.

WO 2007/143483 A2

## B

tannate, tartrate, teoclate, tosylate, triethiodide, trimethylammonium and valerate. Other salts, which are not pharmaceutically acceptable, may be useful in the preparation of compounds of this invention and these form a further aspect of the invention.

While it is possible that, for use in the cancer treatment methods of the present invention, compounds of formula (I) and formula (II) as well as salts or solvates thereof may be administered as the raw chemicals, it is possible to present the active ingredients as pharmaceutical compositions. The pharmaceutical compositions include a compound of formula (I) or salts or solvates thereof, and one or more pharmaceutically acceptable carriers, diluents, or excipients, or a compound of formula (II) or salts or solvates thereof, and one or more pharmaceutically acceptable carriers, diluents, or excipients. Additionally, the pharmaceutical composition may include a compounds of formula (I) and formula (II), or salts or solvates thereof, and one or more pharmaceutically acceptable carriers, diluents, or excipients. The carrier(s), diluent(s) or excipient(s) must be acceptable in the sense of being compatible with the other ingredients of the formulation and not deleterious to the recipient thereof.

Pharmaceutical formulations may be presented in unit dose forms containing a predetermined amount of active ingredient per unit dose. Such a unit may contain, for example, 0.5mg to 1g, preferably 10mg to 500mg, of a compound of formula (I) or formula (II), or 0.5mg to 1g, preferably 10mg to 500mg of each compound of formula (I) and formula (II) wherein the compounds are in a single unit dose. The contents of each unit dose may depend on the condition being treated, the route of administration and the age, weight and condition of the patient, or pharmaceutical formulations may be presented in unit dose forms containing a predetermined amount of active ingredient per unit dose. Preferred unit dosage formulations are those containing a daily dose or sub-dose, as herein above recited, or an appropriate fraction thereof, of an active ingredient. Furthermore, such pharmaceutical formulations may be prepared by any of the methods well known in the pharmacy art.

The compounds of formula (I) and formula (II) may be administered by any appropriate route. Suitable routes include oral, rectal, nasal, topical (including buccal and sublingual), vaginal, and parenteral (including subcutaneous, intramuscular, intravenous, intradermal, intrathecal, and epidural). It will be appreciated that the

**Biological Data****Example 3:*****Clinical Study of Orally Administered pazopanib and lapatinib in Patients with Solid Tumors***

Fifty-three patients with various types of tumors were treated with pazopanib and lapatinib once daily. The amount of pazopanib and lapatinib administered to the patients is summarized below in Table 1. Each treatment period was twenty one (21) days, and treatment continued until unacceptable toxicities or disease progression occurred, or treatment was delayed greater than three weeks. Clinical response was determined every three cycles, and was determined by response evaluation criteria in solid tumors (RECIST) guidelines. Safety and pharmacodynamics were separately assessed.

**Table 1**

Lapatinib (mg/day)	Pazopanib (mg/day)	Number of Subjects
750	250	4
750	500	6
1000	250	3
1000	400	2
1000	500	4
1250	250	6
1250	400	7
1500	200	3
1000	400	18

Preliminary representative patient data for some patients showing clinical benefit are shown below in Table 2. The median study duration for the subset of patients shown below was 24 weeks. Of the 17 shown, 11 were on the study for greater than 24 weeks. Prolonged stable disease (SD) was observed in 14 of the 17, and partial remission (PR) was observed in the remaining 3.

# Possible Scene for Use of WIPO CASE

## ■ Routes of applications

Domestic

PCT route

Paris Convention route

Foreign applications

- They are filed or entered to individual countries nearly at the same timing.
- When they are filed from providing offices like JP, KR or US, their original examination results are available on WIPO CASE if examinations have started.
- Examiners can basically search for patent family by their own national application numbers.

Document: Examination report (2012-05-17)

**INTELLECTUAL  
PROPERTY OFFICE**

---

**Your ref :** 11538.30-00164      **Examiner :** Alan Jones  
**Application No:** GB1108683.2      **Tel :** 01633 813551  
**Applicant :** Schlumberger Holdings Limited      **Date of report :** 17 May 2012  
**Latest date for reply:**       Page 1/2

**Patents Act 1977**  
**Examination Report under Section 18(3)**

**Basis of the examination**

1. In the examination of your application I have taken account of the pages 10 & 11 you filed with your agent's letter of 24 May 2011 to amend the application as it was printed by WIPO during the international phase. I confirm that I have taken into account the International Preliminary Report on Patentability dated 3 May 2011.

**Novelty**

2. The invention as defined in claims 1-3 & 7-10 is not new because it has already been disclosed in the following documents:

US4463220 A (GONZALES)	See e.g. fig 2, interior cavity PI in fluid communication with drill string 15, gauge/stabiliser pads 11a, orifice 19 & col. 3 lines 62-65;
US5099934 A (BARR)	See e.g. fig 1, interior cavity 13, gauge/stabilisation pads 18, 19, orifice 20 & col. 5 lines 29-37.

3. The above documents are relevant to the noted claims with reference to the features and passages highlighted against the identity of each document. Further discussion in relation to US4463220 A is also available by referring to Section V of the International Preliminary Report on Patentability dated 3 May 2011.

### Patents Act 1977 Examination Report under Section 18(3)

#### Basis of the examination

1. My examination has taken account of the amendments filed with your agent's letter of 17 July 2012.

#### Support, clarity and consistency

2. The definition that the at least one orifice be positioned "at an angle approximately 90° relative to the plurality of cutters" is not clear. This is especially true as it is asserted in the second paragraph of page 2 of your agent's letter that "any suitable angle can be adopted". It is unclear what the scope of the claim is. What breadth does the term "approximately" cover? For, example does it cover 80°, 75°, 65°, any angle? If one but not another, then what integers does it cover intermediate these values? Of course, the principles of purposive construction as applied in *Catnic Components Ltd* and another v *Hill and Smith Ltd* [1982] RPC 183 and *PLG Research v Ardon* [1995] RPC 287 could be applied if the intended scope of the claims were determinable, but this is not considered the case.

3. While it is noted that a statement of invention has been added, the remainder of the description also requires revision so that it supports the definition of the invention outlined in the claims. For example, in the fourth paragraph of page 6 it is stipulated that "[i]n some embodiments, drill bit 105 contains a single orifice 212". This contradicts the claims that now require a plurality of orifices. This is one of many such inconsistencies. A further inconsistency that equally casts doubt on the invention is the statement under "Combination Anti-Whirl and Self Stabilization Bits" on page 9 that net imbalanced side forces can be produced, and reference to "[i]n such an embodiment", which imply that this is not essential but merely a possibility. Firm statements should be made to support inclusion of features that are deemed requirements by the claims.

4. There is a lack of clarity in the use of the term "imbalanced side force". It is not clear if this imbalance applies only to the object orifice and gage pad or whether it imbalances the whole drill bit. It also appears to contradict the assertion that it provides a net stabilising effect, unless it is counteracting another known force that has not been defined as part of the invention.

### Patents Act 1977 Examination Report under Section 18(3)

#### Basis of the examination

1. In the examination of your application I have taken account of the pages 10 & 11 you filed with your agent's letter of 24 May 2011 to amend the application as it was printed by WIPO during the international phase. I confirm that I have taken into account the International Preliminary Report on Patentability dated 3 May 2011.

#### Novelty

2. The invention as defined in claims 1-3 & 7-10 is not new because it has already been disclosed in the following documents:

US4463220 A (GONZALES) See e.g. fig 2, interior cavity PI in fluid communication with drill string 15, gauge/stabiliser pads 11a, orifice 19 & col. 3 lines 62-65;  
US5099934 A (BARR) See e.g. fig 1, interior cavity 13, gauge/stabilisation pads 18, 19, orifice 20 & col. 5 lines 29-37.

3. The above documents are relevant to the noted claims with reference to the features and passages highlighted against the identity of each document. Further discussion in relation to US4463220 A is also available by referring to Section V of the International Preliminary Report on Patentability dated 3 May 2011.

4. US5099934 A was discovered during a comparison with your equivalent US application, published as US2010/101867 A1.

#### Inventive step

5. The invention as defined in claims 4-6 is obvious in view of what has already been disclosed in the above documents. The definition of certain number of stabilising pads/orifices or certain angular spacing would be obvious in terms of normal design considerations. The definition of a valve would also be obvious to the skilled person in terms of being able to selectively actuate the stabilising fluid flow dependent on the particular downhole operation in hand.
